Getting started

About this User guide

This is the Xperia™ XZ User guide for the Android™ 6.0.1 software version. If you’re not sure which software version your device is running, you can check it in the Settings menu. For more information about software updates, see Updating your device on page 121.

To check the current software version of your device

1. From your Home screen, tap 📢.
2. Find Settings > About phone > Android™ version.

Overview
1. Charging/Notification light
2. Headset jack
3. NFC™ detection area
4. Front camera lens
5. Ear speaker/Second loudspeaker
6. Second microphone
7. Proximity/Light sensor
8. Power key/Fingerprint sensor*
9. Volume/Zoom key
10. Camera key
11. Main loudspeaker
12. Main microphone
13. Charger/USB Type-C™ cable port
14. Wi-Fi®/Bluetooth antenna area
15. Main camera lens
16. Laser AF sensor
17. RGBC-IR sensor
18. Flashlight
19. GPS antenna area
20. Nano SIM/Memory card slot cover

Fingerprint functionality is not available in the US market.

**Assembly**

Your device only supports nano SIM cards. The nano SIM card and the memory card have separate slots in the same holder. Make sure you don’t confuse the two.

To prevent data loss, make sure you turn off your device or unmount the memory card before you drag out the holder to remove the nano SIM card or memory card from the device.

**To insert the nano SIM card and the memory card**

1. Using your fingernail, drag out the SIM/Memory card tray.
2. Firmly place the SIM card in the correct orientation in position (1) as shown in the illustration.
3. Firmly place the memory card in the correct orientation in position (2) as shown in the illustration.
4. Gently push the tray back into the slot until it fits into place.

**To remove the nano SIM card**

1. With the screen facing down, open the nano SIM/Memory card slot cover.
2. Drag out the nano SIM/Memory card tray using your fingernail.
3. Remove the nano SIM card, then gently push the tray back into the slot until it fits into place.
To remove the memory card

1. Either turn off the device, or unmount the memory card under **Settings > Storage & memory > Advanced > Storage > ▲** next to **SD card**.
2. With the screen facing down, open the nano SIM/Memory card slot cover.
3. Drag out the nano SIM/Memory card tray using your fingernail.
4. Remove the memory card, then gently push the tray back into the slot until it fits into place.

**Screen protection**

Before using your device, remove the protection film by pulling up on the protruding tab.

It is recommended to protect your device with a Sony branded screen cover or a protector intended for your Xperia™ model. The use of third party screen protection accessories may prevent your device from working correctly by covering sensors, lenses, speakers, or microphones and can invalidate the warranty.

**Starting your device for the first time**

The first time you start your device, a setup guide helps you to configure basic settings, personalise your device and sign in to your accounts, for example a Google™ account.

**To turn on the device**

1. Press and hold down the power key until the device vibrates.
2. Enter your SIM card PIN when requested, then tap.
3. Wait a moment for the device to start.

Your SIM card PIN is initially supplied by your network operator, but you can change it later from the Settings menu. To correct a mistake made while entering your SIM card PIN, tap.

**To turn off the device**

1. Press and hold down the power key until the options menu opens.
2. In the options menu, tap **Power off**.

It may take a while for the device to shut down.

**Why do I need a Google™ account?**

Your Xperia™ device from Sony runs on the Android™ platform developed by Google™. A range of Google™ applications and services is available on your device when you purchase it, for example, Gmail™, Google Maps™, YouTube™ and the Play Store™ application, which gives you access to the Google Play™ online store.
for downloading Android™ applications. To get the most out of these services, you need a Google™ account. For example, a Google™ account enables you to do all of the following:

- Download and install applications from Google Play™.
- Synchronise your email, contacts and calendar using Gmail™.
- Chat with friends using the Hangouts™ application.
- Synchronise your browsing history and bookmarks using the Google Chrome™ web browser.
- Identify yourself as the authorised user after a software repair using Xperia™ Companion.
- Remotely find, lock or clear a lost or stolen device using the my Xperia™ or Android™ Device Manager services.

For more information about Android™ and Google™, go to http://support.google.com.

It is crucial that you remember your Google™ account username and password. In some situations, you may need to identify yourself for security reasons using your Google™ account. If you fail to give your Google™ username and password in such situations, your device is locked. Also, if you have more than one Google™ account, make sure to enter the details for the relevant account.

To set up a Google™ account on your device

1. From your Home screen, tap 📱.
2. Find and tap Settings > Accounts & sync > Add account > Google.
3. Follow the registration wizard to create a Google™ account, or sign in if you already have an account.

You can also sign in to or create a Google™ account from the setup guide the first time you start your device. Alternatively, you can go online and create an account at www.google.com/accounts.

To remove a Google™ account

1. From your Home screen, tap 📱.
2. Tap Settings > Accounts & sync > Google.
3. Select the Google™ account that you want to remove.
4. Tap ⌚ > Remove account.
5. Tap Remove account again to confirm.

If you remove your Google™ account, any security features that are linked to your Google™ account will no longer be available.

Charging your device

Your device has an embedded, rechargeable battery that can only be replaced by an authorised Sony repair centre. You should never try to open or take apart the device yourself. Doing so can cause damage and void your warranty.

It is recommended that you charge the battery for at least 30 minutes before starting up your device for the first time. You can still use your device while it is charging. To read more about how to improve battery performance, see Battery and power management on page 28.

It is important to use the USB Type-C™ cable (provided) when charging your device as other types of USB cables can damage your device.
To charge your device

1. Plug the charger into a power outlet.
2. Plug one end of the USB Type-C cable into the charger (or into the USB port of a computer).
3. Plug the other end of the cable into the USB Type-C™ port on your device. The notification light illuminates when charging begins.
4. When the device is fully charged, disconnect the cable from your device by pulling it straight outwards. Make sure not to bend the connector.

⚠️ It is important to use the USB Type-C™ cable (provided) when charging your device as other types of USB cables can damage your device.

💡 If the battery is completely depleted, it may take a few minutes before the notification light illuminates and the charging icon appears.

**Battery notification light status**

Device security

Making sure your device is protected

Your device includes several security options, strongly recommended in case of loss or theft.

These options are as follows:

- Set a secure screen lock on your device using a PIN, password or pattern to prevent anyone from accessing or resetting your device. For more information, see Screen lock on page 11.
- Add a Google™ account to prevent others from using your device if it gets stolen or wiped. For more information, see Why do I need a Google™ account? on page 8.
- Activate either the “Protection by my Xperia” or the Android™ Device Manager web service. Using one of these services, you can remotely locate, lock or clear a lost device. For more information, see Finding a lost device on page 19.

Verifying the ownership of your device

Certain protection features require you to either unlock your screen with your PIN, password, pattern, or enter your Google™ account information. Below are examples of protection features and some of the required credentials:

<table>
<thead>
<tr>
<th>Factory Data Reset protection</th>
<th>You must unlock your screen before you are allowed to perform a Factory Data Reset.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protection by my Xperia</td>
<td>If you remotely reset your device using this service, you must enter the username and password for a Google™ account associated with the service. The device must be connected to the Internet before the setup process can be completed. Otherwise, you will not be able to use your device after the reset.</td>
</tr>
<tr>
<td>Android™ Device Manager</td>
<td>If you remotely reset your device using this service, you must enter the username and password for a Google™ account. The device must be connected to the Internet before the setup process can be completed. Otherwise, you will not be able to use your device after the reset.</td>
</tr>
<tr>
<td>Software repair</td>
<td>If you use the Xperia™ Companion software to perform a software repair, you're asked to enter your Google™ account username and password when you start the device after the repair is complete.</td>
</tr>
</tbody>
</table>

For Android™ Device Manager, it is necessary to enter information from a Google™ account. This can be any Google™ account which you have set up on the device as an owner. If you cannot provide the relevant account information during a setup process, you won’t be able to use the device at all.

Screen lock

There are several screen lock options available. The security level of each lock type is listed below in order of weakest to strongest:

- Swipe: no protection, but you have quick access to the Home screen.
- Pattern: draw a simple pattern with your finger to unlock your device.
- PIN: enter a numeric PIN of at least four digits to unlock your device.
- Password: enter an alpha-numeric password to unlock your device.
• Fingerprint: place your registered finger on the power key to unlock your device.

! It is very important that you remember your screen unlock pattern, PIN or password. If you forget this information, it may not be possible to restore important data such as contacts and messages.

⁻⁻⁻ If you have set up a Microsoft® Exchange ActiveSync® (EAS) account on your Xperia™ device, the EAS security settings may limit the lock screen type to only a PIN or password. This occurs when your network administrator specifies a lock screen type for all EAS accounts for enterprise security reasons. Contact the network administrator of your company or organisation to check what network security policies are implemented for mobile devices. Fingerprint functionality is not available in the United States.

To create a screen lock pattern
1 From your Home screen, tap .
2 Find and tap Settings > Lock screen & security > Screen lock > Pattern.
3 Follow the instructions on your device.

! If you enter an incorrect lock pattern five times in a row, you must wait 30 seconds before trying again.

To change your screen lock type
1 From your Home screen, tap .
2 Find and tap Settings > Lock screen & security > Screen lock.
3 Follow the instructions on your device.

To change the screen lock pattern
1 From your Home screen, tap .
2 Find and tap Settings> Lock screen & security > Screen lock.
3 Draw your screen unlock pattern.
4 Tap Pattern and follow the instructions on your device.

To create a screen lock PIN
1 From your Home screen, tap .
2 Find and tap Settings > Lock screen & security > Screen lock > PIN.
3 Enter a numeric PIN, then tap Continue.
4 Re-enter and confirm your PIN, then tap OK.

To create a screen lock password
1 From your Home screen, tap .
2 Find and tap Settings > Lock screen & security > Screen lock > Password.
3 Follow the instructions on your device.

To activate the Swipe unlock function
1 From your Home screen, tap .
2 Find and tap Settings > Lock screen & security > Screen lock.
3 Draw your screen unlock pattern, or enter your PIN or password depending on which of these screen lock types is enabled.
4 Tap Swipe, then tap Yes, remove.

Fingerprint unlock

! The pattern, PIN or password screen lock you set up serves as a backup unlock method if you enable the Fingerprint unlock option. Selecting other screen lock types will clear all fingerprint settings.

You can use your fingerprint to quickly unlock your device. To use this feature, you need to register a fingerprint and enable this feature in the Fingerprint Manager first. For details on registering fingerprints, see Fingerprint Manager on page 13.

⁻⁻⁻ Fingerprint functionality is not available in the US market.
To enable Fingerprint unlock
1. From your Home screen, tapacies.
2. Find and tap Settings > Lock screen & security > Fingerprint Manager.
3. Confirm your pattern, PIN or password if prompted.
4. Follow the instructions on your device to register a fingerprint.

To unlock the device using your fingerprint
- With the lock screen active, place your finger on the power key so that the device can scan your fingerprint and unlock the screen. Make sure that you use a finger that you have registered in Fingerprint Manager.
  ✔ If you fail to unlock the screen using your fingerprint after five attempts, you can use your backup pattern, PIN or password instead.

Resetting a forgotten screen lock
If you’ve forgotten your screen lock PIN, password or pattern, you may be able to reset it using the Protection by my Xperia service. No content on your device is lost after you have performed a screen lock reset using this service.

To activate the Protection by my Xperia service, see Finding a lost device on page 19.

To reset the screen lock using Protection by my Xperia
1. Make sure you know your Google™ account username and password and that you have enabled the Protection by my Xperia service on your device.
2. Go to myxperia.sonymobile.com using any Internet-connected device.
3. Sign in using the same Google™ account that you have set up on your device.
4. Click the picture of your device under Your devices.
5. Select Lock or Change PIN2 to replace the current screen lock with a new PIN code.
6. Follow the on-screen instructions provided by Protection by my Xperia.
   ! Depending on your security settings, your device may lock after a screen lock reset. You then need to enter your Google™ account username and password in order to use the device.

Fingerprint Manager
✔ Before using the Fingerprint sensor, make sure the sensor is clean and without any visible moisture.

Fingerprint Manager registers fingerprint information that can be used as an additional security method for unlocking your device or authenticating purchases. You are allowed to register a maximum of 5 fingerprints on your device.
✔ Fingerprint functionality is not available in the US market.

To register a fingerprint for the first time
1. From your Home screen, tapacies.
2. Find and tap Settings > Lock screen & security > Fingerprint Manager.
3. Follow the on-screen instructions to complete fingerprint registration.
   ! When registering a fingerprint for the first time, you are also prompted to set up a pattern, PIN or password as a security backup if you have not already done so. For more information on setting up a Screen lock, see Screen lock on page 11.
   ✔ The fingerprint sensor is on the power key and not on the screen of your device. Before using the Fingerprint sensor, make sure the sensor is clean and without any visible moisture.
To register additional fingerprints
1. From your Home screen, tap 📞.
2. Find and tap Settings > Lock screen & security > Fingerprint Manager.
3. Confirm your pattern, PIN or password.
4. Tap ✅, then follow the on-screen instructions.

To delete a registered fingerprint
1. From your Home screen, tap 📞.
2. Find and tap Settings > Lock screen & security > Fingerprint Manager.
3. Tap the registered fingerprint, then tap Delete > Delete.

To rename a registered fingerprint
1. From your Home screen, tap 📞.
2. Find and tap Settings > Lock screen & security > Fingerprint Manager.
3. Tap a registered fingerprint in the list and then enter a fingerprint name.
4. Tap OK.

Unlocking your device automatically
The Smart Lock feature makes unlocking your device easier by letting you set it to unlock automatically in certain situations. You can keep your device unlocked, for example, when it’s connected to a Bluetooth® device or when you’re carrying it with you.

To prepare your device to unlock automatically, you first need to perform the following steps in the order given:
* Make sure you have an active Internet connection, preferably a Wi-Fi® connection to limit data traffic charges.
* Make sure that all your apps are updated using the Play Store™ application in order to ensure that the Google Play™ services app is updated. Having an up-to-date Google Play™ services app ensures that you can use the latest Smart Lock features.
* Enable Smart Lock.
* Set when you want your device to unlock automatically.

⚠️ - The Smart Lock feature is developed by Google™ and the exact functionality may change over time due to updates from Google™.
   - The Smart Lock feature may not be available in every market, country or region.

To enable Smart Lock
1. Set a pattern, PIN or password as a screen lock if you have not already done so.
2. From your Home screen, tap 📞.
3. Find and tap Settings > Lock screen & security > Trust agents.
4. Tap the Smart Lock (Google) slider to enable the function.
5. Tap the back arrow next to Trust agents.
6. Find and tap Smart Lock.
7. Enter your pattern, PIN or password. You need to enter this screen lock any time you want to change your Smart Lock settings.
8. Select a Smart Lock type.

Setting when to keep the device automatically unlocked
You can set Smart Lock to keep your device unlocked using the following settings:
* Trusted devices — Keep your device unlocked when a trusted Bluetooth® or NFC device is connected.
* Trusted places — Keep your device unlocked when you’re in a trusted location.
* On-body detection — Keep your device unlocked when you’re carrying your device with you.
* Trusted face — Unlock your phone by looking at it.
* Trusted voice — Set up voice recognition to search in any screen or unlock your device when the sound matches your voice model.
You have to manually unlock your device when you don't use it for 4 hours and after you restart it.

Connecting to trusted Bluetooth® devices

You can designate a connected Bluetooth® device as a trusted device and keep your Xperia™ device unlocked while it's connected to it. So if you have Bluetooth® devices that you connect to regularly, for example, a car speaker or home entertainment system, a Bluetooth® watch or a fitness tracker, you can add them as trusted devices and bypass the added security of the lockscreen to save time. This feature is suitable if you're normally in a relatively secure place when you use these devices. In some cases, you may still need to manually unlock your device before a trusted device can be connected.

⚠️ It is not recommended to add devices that are constantly connected to your device as trusted devices, for example, Bluetooth® keyboards or cases.

🎉 As soon as a trusted Bluetooth® device is switched off or moves out of range, your screen locks and you need your PIN, pattern or password to unlock it.

To add a trusted Bluetooth® device

1. Make sure your device is paired and connected to the Bluetooth® device that you want to add as a trusted device.
2. Find and tap Settings > Lock screen & security > Smart Lock > Add trusted device > Bluetooth.
3. Tap a device name to select it from the list of connected devices. Only paired devices appear in this list.
4. Depending on the security of your connection, you may need to manually unlock your device before the trusted device can keep it unlocked.

To remove a trusted Bluetooth® device

1. From your Home screen, tap 📲.
2. Find and tap Settings > Lock screen & security > Smart Lock > Trusted devices.
3. Tap the device that you want to remove.
4. Tap Remove trusted device.

Making sure you're secure when using trusted devices

Different Bluetooth® devices support different Bluetooth® standards and security capabilities. There's a possibility that someone could keep your Xperia™ device unlocked by imitating your Bluetooth® connection, even if your trusted device is no longer nearby. Your device is not always able to determine whether your connection is secure from someone trying to imitate it.

When your device can’t determine whether you’re using a secure connection, you'll get a notification on your Xperia™ device and may need to manually unlock it before the trusted device can keep it unlocked.

Bluetooth® connectivity range can vary depending on factors like the model of your device, the connected Bluetooth® device, and your environment. Depending on these factors, Bluetooth® connections can work over distances up to 100 metres.

Connecting to trusted places

When the Trusted places feature is set up, the lock screen security on your Xperia™ device gets disabled when you are in a designated trusted location. For this feature to work, you must have an Internet connection (preferably over Wi-Fi®) and allow your device to use your current location.
To set up trusted places, first make sure that high accuracy location mode or battery-saving location mode is enabled on your device before you add home or custom locations.

The exact dimensions of a trusted location are an estimate and may extend beyond the physical walls of your home or other areas that you have added as a trusted locations. This feature can keep your device unlocked within a radius of up to 80 metres. Also be aware that location signals can be replicated or manipulated. Someone with access to specialised equipment could unlock your device.

To add your home location
1. From your Home screen, tap 📱.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode.
4. From your Home screen, tap 📱.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places > Home.
6. Tap Turn on this location.

To edit your home location
1. From your Home screen, tap 📱.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode.
4. From your Home screen, tap 📱.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places.
6. Select your home location.
7. Tap Edit.
8. In the search bar, enter the location that you want to use as your home location.

- If other residences share your street address, you can add the actual location of your home within the building complex as a custom place.

To remove your home location
1. From your Home screen, tap 📱.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode setting.
4. From your Home screen, tap 📱.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places > Home.
6. Tap Turn off this location.

Using custom locations
You can add any location as a trusted, custom place where your device can remain unlocked.
To add a custom place

1. From your Home screen, tap 📦.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode.
4. From your Home screen, tap 📦.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places.
6. Tap Add trusted place.
7. To use your current location as a trusted, custom place, tap Select this location.
8. Alternatively, to enter another location, tap the magnifying glass icon and type the address. Your device searches for the entered location. To use the suggested address, tap the address.
9. To fine-tune the location, tap the back arrow next to the address, drag the location pin to the desired location, then tap Select this location.

To edit a custom place

1. From your Home screen, tap 📦.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode setting.
4. From your Home screen, tap 📦.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places.
6. Select the place that you want to edit.
7. Tap Edit address.
8. To enter another location, tap the magnifying glass icon and type the address. Your device searches for the entered location. To use the suggested address, tap the address.
9. To fine-tune the location, tap the back arrow next to the address, then drag the location pin to the desired location, then tap Select this location.

To remove a custom place

1. From your Home screen, tap 📦.
2. Find and tap Settings > Location, then tap the slider to enable location services.
3. Tap Mode, then choose High accuracy or Battery saving Location mode.
4. From your Home screen, tap 📦.
5. Find and tap Settings > Lock screen & security > Smart Lock > Trusted places.
6. Select the place that you want to remove.
7. Tap Delete.

Keeping your device unlocked while you’re carrying it

Using the On-body detection feature, you can keep your device unlocked while you’re carrying it in your hand or in a pocket or bag. The accelerometer in your device keeps your device unlocked while it senses that it’s being carried. The device locks when the accelerometer detects that the device has been put down.

When you use the On-body detection feature, you need to be aware of the following behaviours:

• Any time you put your device down and it senses that it’s no longer being carried, it locks automatically.
• The device can take up to one minute to lock.
• After you get into a car, bus, train or other land vehicle, your device can take between 5 and 10 minutes to lock.
• Note that when you get on an airplane or a boat (or another non-land based vehicle), your device may not lock automatically, so make sure to lock it manually if needed.
• When you pick up your device again or get out of the vehicle, just unlock it once and your device then stays unlocked for as long as you have it on you.

! The On-body detection feature can’t distinguish whose body is connected. If you give your device to someone else while it’s unlocked using On-body detection, your device may stay...
unlocked for the other user. Keep in mind that On-body detection as a security feature is less secure than a pattern, PIN, or password.

To enable or disable On-body detection
1. From your Home screen, tap 📱.
2. Find and tap Settings > Lock screen & security > Smart Lock > On-body detection.
3. Tap the slider to enable or disable the function.

SIM card protection
You can lock and unlock each SIM card that you use in your device with a PIN (Personal Identification Number). When a SIM card is locked, the subscription linked to the card is protected against misuse, meaning that you have to enter a PIN every time you start your device.

If you enter the PIN incorrectly too many times, your SIM card will get blocked. You then need to enter your PUK (Personal Unblocking Key) and a new PIN. Your PIN and PUK are supplied by your network operator.

To set up or remove a SIM card lock
1. From the Home screen, tap 📱.
2. Find and tap Settings > Lock screen & security > Set up SIM card lock.
3. Tap the Lock SIM card slider to enable or disable the SIM card lock.
4. Enter the SIM card PIN and tap OK. The SIM card lock is now active and you will be prompted to enter the PIN every time you restart the device.

To change the SIM card PIN
1. From the Home screen, tap 📱.
2. Find and tap Settings > Lock screen & security > Set up SIM card lock.
3. Tap Change SIM PIN.
4. Enter the old SIM card PIN and tap OK.
5. Enter the new SIM card PIN and tap OK.
6. Re-type the new SIM card PIN and tap OK.

To unlock a blocked SIM card using the PUK code
1. Enter the PUK code and tap ✅.
2. Enter a new PIN code and tap ✅.
3. Re-enter the new PIN code and tap ✅.

If you enter an incorrect PUK code too many times, you need to contact your network operator to get a new SIM card.

Finding the identification number of your device
Your device has a unique identification number. This number is referred to as the IMEI (International Mobile Equipment Identity). You should keep a copy of this number. You may require it, for example, when you access the Xperia™ Care support service to register your device. Also, if your device is stolen, some network providers can use this number to stop the device from accessing the network in your country or region.
To view your IMEI number on the label tray

1. Open the cover for the nano SIM and memory card slot.
2. Place a fingernail or other object with a long, fine tip under the edge of the label tray, then drag the tray outwards. The IMEI number is displayed on the label tray.

💡 To view the IMEI number, you can also open the phone dialer and enter "#06#.

To view your IMEI number via the device settings

1. From your Home screen, tap 📦.
2. Find and tap Settings > About phone > Status > IMEI information.

Finding a lost device

If you have a Google™ account, the “Protection by my Xperia” web service can help you locate and secure your device if you ever lose it. If you have activated this service on your device, you can:

- Locate your device on a map.
- Sound an alert even if the device is in Do not disturb mode.
- Remotely lock the device and make the device display your contact details to anyone who finds it.
- Remotely clear the internal and external memory of the device as a last resort.

❗ If you’ve cleared the internal memory of the device using the “Protection by my Xperia” web service, you must sign in to a Google™ account that was previously synced on this device the next time you turn on the device.

❗ The “Protection by my Xperia” service may not be available in all countries or regions.
To activate Protection by my Xperia

1. Make sure you have an active data connection, and enable location services on your device.
2. From your Home screen, tap 📀.
3. Find and tap Settings > Lock screen & security > Protection by my Xperia > Activate.
4. Mark the checkbox to agree to the terms and conditions of the service, then tap Accept.
5. If prompted, sign in to your Google™ account, or create a new account if you don't already have one.
6. To verify that Protection by my Xperia can locate your device, go to myxperia.sonymobile.com and sign in using the Google™ account that you are using on your device.

⚠️ If you are sharing a device with multiple users, note that the Protection by my Xperia service is only available to the user who is logged in as the owner.

Finding a lost device using Android™ Device Manager

Google™ offers a location and security web service called Android™ Device Manager. You can use it in parallel with, or as an alternative to, the my Xperia service. If you lose your device, you can use Android™ Device Manager to:

* Find and show where your device is located.
* Ring or lock your device, erase everything on it, or add a phone number to the lock screen.

For additional information about Android™ Device Manager, go to www.support.google.com.

⚠️ Android™ Device Manager does not work if your device is turned off or if it does not have a connection to the Internet. The Android™ Device Manager service may not be available in all countries or regions.

To activate Android™ Device Manager

1. If you are sharing a device with multiple users, make sure that you are logged in as the owner.
2. Make sure that you have an active data connection and that location services are enabled.
3. From your Home screen, tap 📀.
5. Tap the sliders beside Remotely locate this device and Allow remote lock and erase to enable both functions.
6. If prompted, agree to the terms and conditions by tapping Activate.
7. To verify that Android™ Device Manager can locate your device after you activate the service, go to www.android.com/devicemanager and sign in using your Google™ account.
Learning the basics

Using the touchscreen

Tapping

- Open or select an item.
- Mark or unmark a checkbox or option.
- Enter text using the on-screen keyboard.

Touching and holding

- Move an item.
- Activate an item-specific menu.
- Activate selection mode, for example, to select several items from a list.

Pinching and spreading

- Zoom in or out on web pages, photos and maps, and when you're taking photos or shooting videos.
Swiping

- Scroll up or down a list.
- Scroll left or right, for example, between Home screen panes.
- Swipe left or right to reveal more options.

Flicking

- Scroll quickly, for example, in a list or on a web page. You can stop the scrolling movement by tapping the screen.

Locking and unlocking the screen

When your device is on and left idle for a set period of time, the screen darkens to save battery power and locks automatically. This lock prevents unwanted actions on the touchscreen when you are not using it. When you buy your device, a basic screen swipe lock is already set. This means that you have to swipe left or upwards on the screen to unlock it. You can change the security settings later and add other kinds of locks. See Screen lock on page 11.
To activate the screen

- Briefly press the power key 🖤.

To lock the screen

1. When the screen is active, briefly press the power key 🖤.
2. Alternatively, double tap any empty area on the Home screen. To enable this function, touch and hold any area on your Home screen until the device vibrates, then tap 🕒 and tap the slider beside Double-tap to sleep.

Home screen

The Home screen is the starting point for using your device. It's similar to the desktop on a computer screen. Your Home screen can have up to twenty panes, which extend beyond the regular screen display width. The number of Home screen panes is represented by a series of dots at the lower part of the Home screen. The highlighted dot shows the pane that is currently displayed.

To go to the Home screen

- Press 🕒.

To browse the Home screen

Home screen panes

You can add new panes to your Home screen (up to a maximum of twenty panes) and delete panes. You can also set the pane that you want to use as the main Home screen pane.
To set a pane as the main Home screen pane

1. Touch and hold any area on your Home screen until the device vibrates.
2. Flick left or right to browse to the pane that you want to set as your main Home screen pane, then tap 📥 in the top left corner of the screen.

! If you reserve the left-most pane for Google Search and Now, the main Home screen pane cannot be changed. For more information, see Google Search and Now on page 112.

To add a pane to your Home screen

1. Touch and hold any area on your Home screen until the device vibrates.
2. To browse the panes, flick all the way to the right or left, then tap 📥.

! If you reserve the left-most pane for the Google Search and Now interface, additional panes cannot be added to the left. For more information, see Google Search and Now on page 112.

To delete a pane from your Home screen

1. Touch and hold any area on your Home screen until the device vibrates.
2. Flick left or right to browse to the pane that you want to delete, then tap 🏷️ on the top right corner of the pane.

Home screen settings

To disable or uninstall an application from the Home screen

! Disabling a pre-installed app deletes all data, but the app can be enabled again from Settings > Apps. Only downloaded apps can be fully uninstalled.

1. Touch and hold any area on your Home screen until the device vibrates.
2. Flick left or right to browse the panes. All applications that can be disabled or uninstalled are indicated by 🕒.
3. Tap the relevant application, then tap Disable if the app came pre-installed on your device or UNINSTALL if the app was downloaded.

To adjust the size of icons on your Home screen

1. Touch and hold any area on your Home screen until the device vibrates, then tap 🖼️.
2. Tap Icon size, then select an option.

Application screen

The Application screen, which you open from the Home screen, contains the applications that come pre-installed on your device as well as applications that you download.
To view all applications on the Application screen
1. From your Home screen, tap 🗳️.
2. Flick left or right on the Application screen.

To enable or disable the recommended apps listings
The first time you access the application screen you get the option to enable or disable recommended apps listings. You can also enable or disable this feature later by following the steps below:
1. Touch and hold any area on your Home screen until the device vibrates, then tap 🗳️.
2. Tap the App recommendations slider.

To open an application from the Application screen
• When the Application screen is open, flick left or right to find the application, and then tap the application.

To search for an application from the Application screen
1. When the Application screen is open, tap Search applications or simply swipe down on the Application screen or Home screen.
2. Enter the name of the application that you want to search for.

To arrange applications on the Application screen
1. When the Application screen is open, tap ⏏️.
2. Tap Sort apps, then select an option.

To add an application shortcut to the Home screen
1. On the Application screen, touch and hold an application icon until the device vibrates, then drag the icon to the top of the screen. The Home screen opens.
2. Drag the icon to the desired location on the Home screen, then release it.

To move an application on the Application screen
1. When the Application screen is open, tap ⏏️.
2. Make sure that Own order is selected under Sort apps.
3. Touch and hold the application until the device vibrates, then drag it to the new location.

To disable or uninstall an application from the Application screen
⚠️ Disabling a pre-installed app deletes all data, but the app can be enabled again from Settings > Apps. Only downloaded apps can be fully uninstalled.
1. Touch and hold any area on the Application screen until the device vibrates. All applications that can be disabled or uninstalled are then indicated by 🛑.
2. Tap the relevant application, then tap Disable if the app came pre-installed on your device or UNINSTALL if the app was downloaded.
Navigating applications

You can navigate between applications using the navigation keys, the favourites bar, and the recently used applications window, which lets you switch easily between all recently used applications. The navigation keys are the Home key, the Recent apps key and the Back key. Some applications get closed when you press the Home key to exit while others are paused or continue to run in the background. If an application is paused or running in the background, you can continue where you left off the next time you open the application.

To open the recently used applications window

- Press \[\text{Home}\].

To close all the recently used applications

- Tap \[\text{Home}\] and then tap \[\text{Home}\].

To open a menu in an application

- While using the application, tap \[\text{Menu}\].

A menu is not available in all applications.

Widgets

Widgets are small applications that you can use directly on your Home screen. They also function as shortcuts. For example, the Weather widget allows you to see basic weather information directly on your Home screen. When you tap the widget, the full Weather application opens. You can download additional widgets from Google Play™.

To add a widget to the Home screen

1. Touch and hold any empty area on your Home screen until the device vibrates, then tap Widgets.
2. Find and tap the widget that you want to add.
To resize a widget
1 Touch and hold a widget until the device vibrates, then release it. If the widget can be resized, for example, the Calendar widget, then a highlighted frame and resizing dots appear.
2 Drag the dots inward or outward to shrink or expand the widget.
3 To confirm the new size of the widget, tap anywhere on the Home screen.

To move a widget
• Touch and hold the widget until the device vibrates, then drag it to the new location.

To remove a widget
• Touch and hold the widget until the device vibrates, then drag it to Remove from Home screen.

Shortcuts and folders
Use shortcuts and folders to manage your applications and keep your Home screen tidy.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Access an application using a shortcut</td>
</tr>
<tr>
<td>2</td>
<td>Access a folder containing applications</td>
</tr>
</tbody>
</table>

To add an application shortcut to your Home screen
1 Touch and hold an empty area on your Home screen.
2 In the customisation menu, tap Widgets > Shortcuts.
3 Scroll through the list and select an application. The selected application gets added to the Home screen.

To move an item on the Home screen
• Touch and hold the item until the device vibrates, then drag the item to the new location.

To remove an item from the Home screen
• Touch and hold the item until the device vibrates, then drag the item to Remove from Home screen on the top of the screen.

To create a folder on the Home screen
• Touch and hold an application icon or a shortcut until the device vibrates, then drag and drop it on top of another application icon or shortcut.

To add items to a folder on the Home screen
• Touch and hold an item until the device vibrates, then drag the item to the folder.
To rename a folder on the Home screen
1. Tap the folder to open it.
2. Tap the folder’s title bar to show the Folder name field.
3. Enter the new folder name and tap Done.

**Background and themes**
You can adapt the Home screen to your own style using wallpapers and themes.

To change your Home screen wallpaper
1. Touch and hold any empty area on your Home screen until the device vibrates.
2. Tap Wallpapers and select an option.

To set a theme
1. Touch and hold an empty area on your Home screen until the device vibrates.
2. Tap Themes.
3. Select an option and follow the instructions on your device.

! When you change a theme, the background also changes in some applications.

**Battery and power management**
Your device has an embedded battery. You can keep track of your battery consumption and see how much power applications are using. You can remove apps and activate a number of power saving modes to get more out of your battery. You can also view an estimate of how much battery time is left and adjust your settings to improve performance and make your battery last longer.

To view your battery consumption and estimated battery time
1. From your Home screen, tap 📡.
2. Find and tap Settings > Battery. An overview appears showing the battery percentage and an estimated battery time.
3. Tap SHOW BATTERY USAGE to view a list of features and services that have consumed battery power since the last charging cycle. Tap any of them to see details of its energy consumption.

Tip You can configure and activate power saving modes from Settings > Battery.

To view how much battery power applications use
1. From your Home screen, tap 📡.
2. Find and tap Settings > Apps.
3. Select an application and review its battery consumption under Battery usage.

**Battery optimisation**
Battery optimisation is a powerful and convenient built-in mode which improves your battery life significantly by reducing battery consumption when you are not using the device or certain apps.

This is achieved by suspending battery draining network activities, such as location services, syncing and Wi-Fi® scanning in the background when you have not been using your device for a long time.

Phone calls and SMS messaging are not affected.

To make specific applications exempt from optimisation
From your Home screen, tap .

Find and tap Settings > Battery.

Tap ; and select Battery optimisation. You will see a list of applications that are not optimised.

To add or remove applications from this list, tap Apps and select or de-select an application from the list to edit its optimisation settings.

The list of applications that are not optimised will get updated according to your settings.

You can also configure Battery optimisation from the Apps menu by tapping .

Power saving modes

There are several power saving modes available for you to use if you want to make your battery last longer:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>STAMINA mode</td>
<td>Disables GPS when the screen is turned off, and restricts background data. You can further customise STAMINA mode by selecting from the different STAMINA levels. appears in the status bar when this mode takes effect.</td>
</tr>
<tr>
<td>Ultra STAMINA</td>
<td>Limits your device’s functionality to core tasks such as making phone calls and sending SMS messages. appears in the status bar once this mode is activated.</td>
</tr>
</tbody>
</table>

If you are sharing a device with multiple users, you may need to log in as the owner, that is, the primary user, to activate or deactivate a power saving mode.

To activate STAMINA mode

1. From your Home screen, tap .
2. Find and tap Settings > Battery.
3. Tap STAMINA mode and select the preferred option.
   - appears in the status bar when STAMINA mode is active.
   - You can adjust the Auto-start percentage according to your preferences.

To activate Ultra STAMINA mode

1. From your Home screen, tap .
2. Find and tap Settings > Battery.
3. Tap Ultra STAMINA mode and then tap Activate .
4. Confirm to activate.

Your Home screen is replaced by Ultra STAMINA mode Home and appears in the status bar when Ultra STAMINA mode is active.

Battery Care

Battery Care is not available in the US market.

When charging your device battery it is best to disconnect the charger once the battery reaches 100%, in order to maximise the battery’s lifespan. Battery Care detects periods when the device battery is regularly left charging for a long time, and estimates the start and end of these periods. The rate of charging is then controlled during the next charging cycle so that your battery reaches 100% just before you disconnect the charger.

Battery Care will not control the charging rate until it detects a regular charging cycle. This may take several days.

To enable or disable Battery Care

1. From your Home screen tap , then find and tap Settings.
2. Tap Battery, then tap Battery Care.
3. Tap the slider to enable or disable Battery Care.
**Taking a screenshot**

You can capture still images of any screen on your device as a screenshot. Screenshots you take are automatically saved in Album.

**To take a screenshot**

1. Press and hold down the power key until a prompt window appears.
2. Tap `[+]`.

⚠️ You can also take a screenshot by pressing and holding the power key and volume down key at the same time. Once the screenshot is captured, you can release the keys.

**To view your screenshot**

* Double-tap the status bar to display the Notification panel, then tap the screenshot you want to view.

⚠️ You can also view your screenshots in the Album application.

**Notifications**

Notifications inform you of events such as new messages and calendar notifications as well as activities in progress such as file downloads. Notifications appear in the following places:

* The status bar
* The Notification panel
* The lock screen

**To open or close the Notification panel**

1. To open the Notification panel, drag the status bar downwards, or simply double-tap it.
2. To close the Notification panel, drag or flick the panel upwards.

**To take action on a notification in the Notification panel**

* Tap the notification.

**To dismiss a notification from the Notification panel**

* Place your finger on a notification and flick left or right.

**To expand a notification on the Notification panel**

* Drag the notification downwards.

⚠️ Not all notifications are expandable.

**To clear all notifications from the Notification panel**

* Tap [Dismiss all].
To take action on a notification from the lock screen
- Double-tap the notification.

To dismiss a notification from the lock screen
- Place your finger on the notification and flick left or right.

To expand a notification on the lock screen
- Drag the notification downwards.

! Not all notifications are expandable.

Managing notifications on the lock screen
You can set up your device so that only selected notifications get displayed on your lock screen. You can make all notifications and their content accessible, hide sensitive content for all notifications or specific apps, or choose not to show any notifications at all.

To select the notifications to display on the lock screen
1 From your Home screen, tap 📱.
2 Find and tap Settings > Sound & notification > When device is locked.
3 Select an option.

Notification display options on the lock screen

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show all notification content</td>
<td>Get all notifications on the lock screen. When you have this setting turned on, keep in mind that all content (including the content of incoming emails and chat messages) will be visible on your lock screen unless you designate the relevant apps as Hide sensitive content in the App notifications settings menu.</td>
</tr>
<tr>
<td>Hide sensitive notification content</td>
<td>You must have a PIN, password, or pattern set up as your screen lock in order for this setting to be available. Contents hidden is displayed on the lock screen when sensitive notifications arrive. For example, you’ll get a notification for an incoming email or chat, but the content won’t be visible on your lock screen.</td>
</tr>
<tr>
<td>Don’t show notifications at all</td>
<td>You won’t get any notifications on the lock screen.</td>
</tr>
</tbody>
</table>

Setting the notification level for an app
You can set different notification behaviour for individual applications. For example, you can block all email notifications, prioritise Facebook™ notifications and make the content of messaging notifications invisible on the lock screen.

To set the notification level for an app
1 From your Home screen, tap 📱.
2 Find and tap Settings > Sound & notification > App notifications.
3 Select the desired app.
4 Tap the sliders to adjust notification settings as desired.

Notification levels and options for specific applications

<table>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Block all</td>
<td>Never show notifications for the selected app.</td>
</tr>
<tr>
<td>Treat as priority</td>
<td>Receive notifications from this app when Do not disturb is set to Priority only.</td>
</tr>
<tr>
<td>Allow peeking</td>
<td>Let this app emphasise certain notifications by sliding them briefly into view on the screen.</td>
</tr>
<tr>
<td>Hide sensitive content</td>
<td>When the device is locked, hide content in this app’s notifications that might reveal private information.</td>
</tr>
</tbody>
</table>
Notification light

The notification light informs you about battery status and some other events. For example, a flashing white light means there is a new message or a missed call. The notification light is enabled by default but can be disabled manually.

When the notification light is disabled, it only lights up when there is a battery status warning, for example, when the battery level goes below 15 percent.

To enable or disable the notification light

1. From your Home screen, tap 📲.
2. Find and tap Settings > Sound & notification.
3. Tap the Notification light slider.

GPS is activated

Synchronisation is ongoing

Problem with sign-in or synchronisation

Depending on your service provider, network or region, the functions or services represented by some icons in this list may not be available.

To manage status bar icons
1. From your Home screen, tap .
2. Find and tap Settings > Display > System icons.
3. Mark the checkboxes for the system icons that you want to appear in the status bar.

Notification icons

- New text message or multimedia message
- Ongoing call
- Missed call
- Call on hold
- Call forwarding is turned on
- New voicemail message
- New email message
- Downloading data
- Uploading data
- Mobile data is disabled
- Perform a basic setup of your device
- A software update is available
- System updates are available
- Downloading system updates
- Tap to install the downloaded system updates
- STAMINA mode is activated
- Ultra STAMINA mode is activated
- Battery Care is activated
- Noise cancelling is on
- Screenshot captured
- New Hangouts™ chat message
- Video chat with friends using the Hangouts™ application
- A song is playing
- The device is connected to a computer via a USB cable
- Internal storage is 75% full — tap to transfer data to a memory card
- Warning
More undisplayed notifications

Battery Care is not available in the US market.

Not all icons that may appear on your device are listed here. This list is for reference purposes only, and changes may be made without notice.

To block an application from sending notifications
1 From your Home screen, tap 📲.
2 Find and tap Settings > Sound & notification > App notifications.
3 Select an application.
4 Tap the Block all slider.

Applications overview

Some applications may not be included on your device or may not be supported by all networks or service providers in all areas.

- Use the Album application to manage, view and edit your photos and videos.
- Browse, search and buy thousands of products right from your device.
- Protect your device against viruses, malware, spyware, phishing attempts and online exploitation.
- Use the Calculator application to perform basic calculations.
- Use the Calendar application to keep track of events and manage your appointments.
- Use the Camera to take photos and record video clips.
- Use the Chrome web browser to navigate and view web pages, manage bookmarks, text and images.
- Use the Clock application to set various kinds of alarms and timers.
- Use the Contacts application to manage phone numbers, email addresses and other information related to your contacts.
- Create, edit and collaborate with others on documents.
- Access your downloaded applications, documents and pictures.
- Save your documents and files for easy access from any device, share them with your friends, and collaborate with colleagues.
- Use the Email application to send and receive emails through both personal and work accounts.
- Use the Facebook™ application for social networking with friends, family members and colleagues around the world.
- Use the Gmail™ application to read, write and organise email messages.
- Search for information on your device and on the web.
- Use the Hangouts™ application to chat with friends online.
- Use the Lifelog application to automatically log events about your daily life. For example, you can set goals and track your progress in achieving them or bookmark special moments.
- Enjoy music, movies, apps and games on your device, and get exclusive access to unique content available only with Xperia™ devices.
| **View your current location, find other locations and plan routes using Google Maps™.** |
| **Use the Messaging application to send and receive text and multimedia messages.** |
| **The Xperia™ Movie Creator automatically creates short video collages using your existing photo and video collection.** |
| **Use the Music application to organise and play music and audio books.** |
| **View news stories from News Suite.** |
| **Make phone calls by dialling the number manually or by using the smart dial function.** |
| **Organise, search or browse through all your photos and videos.** |
| **Use the Google Play Movies & TV application to watch movies and TV shows purchased or rented on Google Play.** |
| **Discover and play thousands of songs with the Google Play Music application.** |
| **Use the Play Store™ application to find applications to buy or download free.** |
| **Stay connected with your gaming friends and the games you love to play, shop on the PlayStation®Store, and more.** |
| **Optimise settings to suit your own requirements.** |

Downloading applications

Downloading applications from Google Play™

Google Play™ is the official online Google store for downloading applications, games, music, movies and books. It includes both free and paid applications. Before you start downloading from Google Play™, make sure that you have a working Internet connection, preferably over Wi-Fi® to limit data traffic charges.

❗️ To use Google Play™, you need to have a Google™ account. Google Play™ may not be available in all countries or regions.

To download an application from Google Play™

1. From the Home screen, tap 📲.
2. Find and tap Play Store.
3. Find an item you wish to download by browsing categories, or by using the search function.
4. Tap the item to view its details, and follow the instructions to complete the installation.

❗️ Some applications may need to access data, settings and various functions on your device in order to work properly. Only install and give permissions to applications that you trust. You can view the permissions granted to a downloaded application and also change their status by tapping the application under Settings > Apps.

Downloading applications from other sources

When your device is set to allow downloads from sources other than Google Play™, you can download applications directly from other websites by following the relevant download instructions.

❗️ Installing applications of unknown or unreliable origin can damage your device. Download applications only from reliable sources. Contact the application provider if you have any questions or concerns.

⚠️ If you are using a device with multiple users, only the owner, that is, the primary user, can allow downloads from sources other than Google Play™. Changes made by the owner affect all other users.

To enable or disable the downloading of applications from other sources

1. From your Home screen, tap 📲.
2. Find and tap Settings > Lock screen & security.
3. Tap the Unknown sources slider.
4. Tap OK.

❗️ Some applications may need to access data, settings and various functions on your device in order to work properly. Only install and give permissions to applications that you trust. You can view the permissions granted to a downloaded application and also change their status by tapping the application under Settings > Apps.
Internet and networks

Browsing the web

The Google Chrome™ web browser for Android™ devices comes pre-installed in most markets. Go to http://support.google.com/chrome and click the "Chrome for Mobile" link to get more detailed information about how to use this web browser.

To browse with Google Chrome™

1. From your Home screen, tap 🌐.
2. Find and tap 🌐.
3. If you are using Google Chrome™ for the first time, select to either sign in to a Google™ account or browse with Google Chrome™ anonymously.
4. Enter a search term or web address in the search and address field, then tap Go on the keyboard.

Internet and MMS settings

To send multimedia messages, or to access the Internet when there is no available Wi-Fi® network, you must have a working mobile data connection with the correct Internet and MMS (Multimedia Messaging Service) settings. Here are some tips:

* For most mobile networks and operators, Internet and MMS settings come pre-installed on your device. You can then start using the Internet and send multimedia messages right away.
* It is possible to download Internet and MMS settings later from the Settings menu.
* You can manually add, change or delete Internet and MMS settings on your device at any time. If you change or delete an Internet or MMS setting by mistake, you can download the Internet and MMS settings again.
* If you cannot access the Internet over a mobile network or if multimedia messaging is not working, even though the Internet and MMS settings have been downloaded successfully to your device, refer to the troubleshooting tips for your device at www.sonymobile.com/support/ for network coverage, mobile data, and MMS issues.

⚠️ If STAMINA mode is activated to save power, all mobile data traffic gets paused when the screen is off. When the screen is on, only foreground applications can use mobile data. If this causes connection problems, try excluding some applications and services from being paused, or deactivate STAMINA mode temporarily. For more information, see Battery and power management on page 28.

误导信息 If you are sharing a device with multiple users, only the owner, that is, the primary user, can download Internet and messaging settings from the Settings menu, but the downloaded settings are applicable to all users.

To download Internet and MMS settings

1. From your Home screen, tap 🌐.
2. Find and tap Settings > More > Internet settings.
3. Tap Accept. Once the settings have been downloaded successfully, ✅ appears in the status bar and mobile data traffic is turned on automatically.

⚠️ If the settings cannot be downloaded to your device, check the signal strength of your mobile or Wi-Fi® network connections. Move to an open location free from obstructions or get close to a window and then try again.
To add Internet and MMS settings manually

1. From your Home screen, tap 📴.
2. Find and tap Settings > More > Mobile networks.
3. Tap Access Point Names > –
4. Tap Name and enter a name as desired.
5. Tap APN and enter the access point name.
6. Enter any other information as required. If you don’t know what information is required, contact your network operator for more details.
7. When you’re done, tap .Done, then tap Save.

To view downloaded Internet and MMS settings

1. From your Home screen, tap 📴.
2. Find and tap Settings > More > Mobile networks.
3. Tap Access Point Names.
4. To view more details, tap any of the available items.

Wi-Fi®

Use Wi-Fi® to surf the Internet, download applications, or send and receive emails. Once you have connected to a Wi-Fi® network, your device remembers the network and automatically connects to it the next time you come within range.

Some Wi-Fi® networks require you to log in to a web page before you can get access. Contact the relevant Wi-Fi® network administrator for more information.

Available Wi-Fi® networks may be open or secured:

- Open networks are indicated by 🌐 next to the Wi-Fi® network name.
- Secured networks are indicated by 🗝 next to the Wi-Fi® network name.

Some Wi-Fi® networks do not show up in the list of available networks because they do not broadcast their network name (SSID). If you know the network name, you can add it manually to your list of available Wi-Fi® networks.

To turn Wi-Fi® on or off

1. From your Home screen, tap 📴.
2. Find and tap Settings > Wi-Fi.
3. Tap the slider to enable or disable Wi-Fi.

⚠️ It may take a few seconds before Wi-Fi® is enabled.

To connect to a Wi-Fi® network automatically

1. From your Home screen, tap 📴.
2. Find and tap Settings > Wi-Fi.
3. Tap the slider to turn on Wi-Fi. All available Wi-Fi® networks are displayed.
4. Tap a Wi-Fi® network to connect to it. For secured networks, enter the relevant password. 🌐 is displayed in the status bar once you are connected.

⚠️ To search for new available networks, tap .Done, then tap Refresh. If you cannot connect to a Wi-Fi network successfully, refer to the relevant troubleshooting tips for your device at www.sonymobile.com/support/.
To add a Wi-Fi® network manually
1. From your Home screen, tap 📲.
2. Find and tap Settings > Wi-Fi.
3. Tap ‡ > Add network.
4. Enter the Network name (SSID) information.
5. To select a security type, tap the Security field.
6. If required, enter a password.
7. To edit advanced options such as proxy and IP settings, tap Advanced options and then edit the options as desired.
8. Tap Save.

! Contact your Wi-Fi® network administrator to get the network SSID and password.

Increasing Wi-Fi® signal strength

There are a number of things you can do to increase the strength of a Wi-Fi® signal:
- Move your device closer to the Wi-Fi® access point.
- Move the Wi-Fi® access point away from any potential obstructions or interference.
- Don’t cover the Wi-Fi® antenna area of your device (the highlighted area in the illustration).

Wi-Fi® settings
When you are connected to a Wi-Fi® network or when there are Wi-Fi® networks available in your vicinity, you can view the status of these networks. You can also enable your device to notify you whenever an open Wi-Fi® network is detected.

To enable or disable Wi-Fi® network notifications
1. Turn on Wi-Fi®, if it is not already on.
2. From your Home screen, tap 📲.
3. Find and tap Settings > Wi-Fi.
4. Tap ‡ > Settings.
5. Tap the Network notification slider.

To view detailed information about a connected Wi-Fi® network
1. From the Home screen, tap 📲.
2. Find and tap Settings > Wi-Fi.
3. Tap the Wi-Fi® network that you are currently connected to. Detailed network information is displayed.

To add a Wi-Fi® sleep policy
1. From the Home screen, tap 📲.
2. Find and tap Settings > Wi-Fi.
3. Tap ‡, then tap Settings > Keep Wi-Fi on during sleep.
4. Select an option.
WPS

WPS (Wi-Fi Protected Setup™) is a wireless networking standard that helps you establish secure wireless network connections. If you have little background knowledge of wireless security, WPS makes it easy for you to set up Wi-Fi Protected Access® (WPA) encryption to secure your network. You can also add new devices to an existing network without entering long passwords.

Use one of these methods to enable WPS:

- Push button method – simply push a button on a WPS-supported device, for example, a router.
- PIN method – your device creates a random PIN (Personal Identification Number), which you enter on the WPS-supported device.

To connect to a Wi-Fi® network using a WPS button
1. From the Home screen, tap 📱.
2. Find and tap Settings > Wi-Fi.
3. Tap , then tap Settings > WPS Push Button, then press the WPS button on the WPS-supported device.

To connect to a Wi-Fi® network using a WPS PIN
1. From your Home screen, tap 📱.
2. Find and tap Settings > Wi-Fi.
3. Turn on Wi-Fi® if it is not already on.
4. Tap > Settings > WPS PIN Entry.
5. On the WPS-supported device, enter the PIN that appears on your device.

Sharing your mobile data connection

You can share your mobile data connection with other devices in several ways:

- USB tethering – share your mobile data connection with a single computer using a USB Type-C™.
- Bluetooth® tethering – share your mobile data connection with up to four other devices via Bluetooth®.
- Portable Wi-Fi® hotspot – share your mobile data connection simultaneously with up to 10 other devices, including devices that support WPS technology.

To share your data connection using a USB cable
1. Using the USB Type-C™ cable provided with your device, connect your device to a computer.
2. From your Home screen, tap 📱.
3. Find and tap Settings > More > Tethering & portable hotspot.
4. Tap the USB tethering slider to enable the function, then tap OK if prompted. is displayed in the status bar once you are connected.
5. To stop sharing your data connection, tap the USB tethering slider again to disable the function or disconnect the USB Type-C cable.

! You cannot share your device’s data connection and SD card over a USB cable at the same time.
To share your mobile data connection with another Bluetooth® device

1. Make sure that your device and the other Bluetooth® device are paired with each other and that mobile data traffic is activated on your device.
2. Your device: From your Home screen, tap 
3. Find and tap Settings > More > Tethering & portable hotspot and then tap the Bluetooth tethering slider to enable the function.
4. Bluetooth® device: Set up the device so that it obtains its network connection using Bluetooth®. If the device is a computer, refer to the relevant instructions to complete the setup. If the device runs on the Android™ operating system, tap the settings icon beside the name of the device that it is paired with under Settings > Bluetooth > Paired devices, then mark the Internet access checkbox.
5. Your device: Tap Settings next to the paired device. Then, mark the internet access checkbox. Wait for  to appear in the status bar. Once it appears, the setup is complete.
6. To stop sharing your mobile data connection, tap the Bluetooth tethering slider again to disable the function.

! The Bluetooth tethering function is turned off every time you turn off your device or turn off the Bluetooth® function.

* For more information about pairing and turning on mobile data traffic, see To pair your device with another Bluetooth® device on page 110 and To add a virtual private network on page 43.

To use your device as a portable Wi-Fi hotspot

1. From your Home screen, tap 
2. Find and tap Settings > More > Tethering & portable hotspot.
3. Tap Portable Wi-Fi hotspot settings > Configure Wi-Fi hotspot.
4. Enter the Network name (SSID) information.
5. To select a security type, tap the Security field. If required, enter a password.
6. Tap Save.
7. Tap , then tap the Portable Wi-Fi hotspot slider to enable the function.
8. If prompted, tap OK to confirm.  appears in the status bar once the portable Wi-Fi® hotspot is active.

To allow a WPS-supported device to use your mobile data connection

1. Make sure that your device is functioning as a portable Wi-Fi® hotspot.
2. From your Home screen, tap 
3. Find and tap Settings > More > Tethering & portable hotspot > Portable Wi-Fi hotspot settings.
4. Under Configure Wi-Fi hotspot, make sure that your portable hotspot is secured by a password.
5. Tap WPS Push Button, then follow the relevant instructions. Alternatively, tap > WPS PIN Entry, then enter the PIN that appears on the WPS-supported device.

To rename or secure your portable hotspot

1. From the Home screen, tap 
2. Find and tap Settings > More > Tethering & portable hotspot.
3. Tap Portable Wi-Fi hotspot settings > Configure Wi-Fi hotspot.
4. Enter the Network name (SSID) for the network.
5. To select a security type, tap the Security field.
6. If required, enter a password.
7. Tap Save.

Controlling data usage

You can keep track of the amount of data transferred to and from your device over your mobile data or Wi-Fi® connection during a given period. For example, you can view the amount of data used by individual applications. For data transferred over
your mobile data connection, you can also set data usage warnings and limits to avoid additional charges.

Adjusting data usage settings can help you keep greater control over data usage but cannot guarantee the prevention of additional charges.

To turn data traffic on or off
1. From your Home screen, tap 📲.
2. Find and tap Settings > Data usage.
3. Tap the Mobile data traffic slider to turn data traffic on or off.

When data traffic is turned off, your device can still establish Wi-Fi® and Bluetooth® connections.

To set a data usage warning
1. Make sure that mobile data traffic is turned on.
2. From your Home screen, tap 📲.
3. Find and tap Settings > Data usage.
4. To set the warning level, drag the warning line to the desired value. You can also enter the data limit manually by tapping on the number displayed beside the line. You receive a warning notification when the amount of data traffic reaches the level you set.

To set a mobile data usage limit
1. Make sure that mobile data traffic is turned on.
2. From your Home screen, tap 📲.
3. Find and tap Settings > Data usage.
4. Tap the Mobile tab.
5. Tap the slider beside Set mobile data limit to enable the function, then tap OK.
6. To set the mobile data usage limit, drag the data limit line to the desired value. You can also set the data limit manually by tapping on the number displayed beside the line.

Once your mobile data usage reaches the set limit, mobile data traffic on your device gets turned off automatically.

To control the data usage of individual applications
1. From your Home screen, tap 📲.
2. Find and tap Settings > Data usage.
3. Tap the application that you want to control, then tap the Restrict app background data slider and tap OK.
4. To access more specific settings for the application, tap App settings and make the desired changes.

The performance of individual applications may be affected if you change the related data usage settings.

To check your data usage
1. From your Home screen, tap 📲.
2. Find and tap Settings > Data usage.
3. Tap ☐, then tap Show Wi-Fi.
4. To view information about the amount of data transferred via Wi-Fi®, tap the Wi-Fi tab.
5. To view information about the amount of data transferred via mobile data connection, tap the Mobile tab.
Selecting mobile networks

Your device automatically switches between mobile networks depending on which mobile networks are available where you are. You can also manually set your device to use a particular mobile network mode, for example, WCDMA or GSM.

Different status icons are displayed in the status bar depending on the type or mode of network that you are connected to. Refer to Status icon on page 32 to see what the different status icons look like.

To select a network mode

1. From your Home screen, tap 
2. Find and tap Settings > More > Mobile networks.
3. Tap Preferred network type, then select a network mode.

To select another network manually

1. From your Home screen, tap 
2. Find and tap Settings > More > Mobile networks > Network operators.
3. Tap Search mode, then select Manual.
4. Select a network.

! If you select a network manually, your device will not search for other networks, even if you move out of range of the manually selected network.

To activate automatic network selection

1. From your Home screen, tap 
2. Find and tap Settings > More > Mobile networks > Network operators.
3. Tap Search mode, then select Automatic.

Virtual private networks (VPNs)

Use your device to connect to virtual private networks (VPNs), which allow you to access resources inside a secured local network from a public network. For example, VPN connections are commonly used by corporations and educational institutions for users who need to access intranets and other internal services when they are outside of the internal network, for example, when they are travelling.

VPN connections can be set up in many ways, depending on the network. Some networks may require you to transfer and install a security certificate on your device. For detailed information about how to set up a connection to your virtual private network, contact the network administrator of your company or organisation.

! If you are using a device with multiple users, you may need to log in as the owner, that is, the primary user, to adjust the settings for VPN.

To add a virtual private network

1. From your Home screen, tap 
2. Find and tap Settings > More > VPN.
3. Tap +.
4. Select the type of VPN to add.
5. Enter your VPN settings.
6. Tap Save.

To connect to a virtual private network

1. From your Home screen, tap 
2. Find and tap Settings > More > VPN.
3. In the list of available networks, tap the VPN that you want to connect to.
4. Enter the required information.
5. Tap Connect.
To disconnect from a virtual private network

1. Double-tap the status bar to open the Notification panel.
2. Tap the notification for the VPN connection to turn it off.
Synchronising data on your device

Synchronising with online accounts
Synchronise your device with contacts, email, calendar events and other information from online accounts, for example, email accounts such as Gmail™ and Exchange ActiveSync, Facebook™ and Flickr™. You can synchronise data automatically for such accounts by activating the auto-sync function, or you can synchronise each account manually.

To set up an online account for synchronisation
1. From your Home screen, tap.
2. Tap Settings > Accounts & sync > Add account, then select the account that you want to add.
3. Follow the instructions to create or sign in to an account.

To synchronise manually with an online account
1. From your Home screen, tap > Settings > Accounts & sync.
2. Tap the name of the account that you want to synchronise with. A list of items appears showing what can be synchronised with the account.
3. Tap the slider next to the item you want to synchronise.

To remove an online account
1. From your Home screen, tap > Settings > Accounts & sync.
2. Tap the name of the account that you want to remove.
3. Tap , then tap Remove account.
4. Tap Remove account again to confirm.

Synchronising with Microsoft® Exchange ActiveSync®
If your company uses a Microsoft Exchange ActiveSync account, you can access your corporate email messages, calendar appointments and contacts directly on your device. After setup, you can find your information in the Email, Calendar and Contacts applications.

To set up an EAS account for synchronisation
1. From your Home screen, tap.
2. Tap Settings > Accounts & sync > Add account > Exchange ActiveSync.
3. Enter your corporate email address and password.
4. Tap Next. Your device begins to retrieve your account information. If a failure occurs, enter the domain and server details for your account manually and then tap Next.
5. Tap OK to allow your corporate server to control your device.
6. Select a synchronisation method, a synchronisation interval and what data you want to sync with your device, such as contacts and calendar entries.
7. Tap Next, then select how you want to be notified when a new email arrives.
8. Tap Next again. Enter a name for the corporate account, then tap Finish setup.
9. If prompted, activate the device administrator to allow your corporate server to set certain security rules on your device, such as disabling voice recording and using storage encryption.

To change the settings of an EAS account
1. From your Home screen, tap.
2. Find and tap Email, then tap.
3. Tap Settings and select an EAS account, then change the settings of the EAS account as desired.
To set a synchronisation interval for an EAS account

1. From your Home screen, tap 📧.
2. Tap Email, then tap ⏯.
3. Tap Settings and select an EAS account.
4. Tap Check frequency.
5. Under Off-peak time settings, tap Check frequency, and select an interval option.

To remove an EAS account

1. From your Home screen, tap 📧 > Settings > Accounts & sync.
2. Tap Exchange ActiveSync, then select the EAS account that you want to remove.
3. Tap ⏯, then tap Remove account.
4. Tap Remove account again to confirm.
Basic settings

Accessing settings
View and change settings for your device from the Settings menu. The Settings menu is accessible from both the Application screen and the Quick settings panel.

To open the device settings menu from the Application screen
1. From your Home screen, tap ☰.
2. Find and tap Settings.

To view information about your device
1. From your Home screen, tap ☰.
2. Find and tap Settings > About phone.

To activate the screen using Tap to wake up mode
1. From your Home screen, tap Settings > Display, then tap the Tap to wake up slider to enable the function.
2. While the screen is in sleep mode, double-tap it to wake it up.

To open or close the Quick settings panel
- To open the Quick settings panel, drag the status bar downwards.

To select which settings to display on the Quick settings panel
1. Drag the status bar fully downwards, then tap Edit.
2. In the bar at the top of the screen, touch and hold the icon for the quick setting that you want to add, then drag and drop it into the lower part of the screen.

To rearrange the Quick settings panel
1. Drag the status bar fully downwards, then tap Edit.
2. Touch and hold an icon, then move it to the desired position.

Volume settings
You can adjust the ringtone volume for incoming calls and notifications as well as for music and video playback.

To adjust the ringtone volume with the volume key
- Press the volume key up or down.

To adjust the media playing volume with the volume key
- When playing music or watching video, press the volume key up or down even when the screen is locked.

To turn on vibrate mode
- Press the volume key up or down until [▼] appears.

To adjust the volume levels
1. From your Home screen, tap ☰.
2. Find and tap Settings > Sound & notification.
3. Drag the volume sliders to the desired positions.

You can also press the volume key up or down and tap ▼ to adjust the ringtone, media playback or alarm volume levels separately.
To set your device to vibrate for incoming calls
1. From your Home screen, tap .
2. Find and tap Settings > Sound & notification.
3. Tap the Also vibrate for calls slider to enable the function.

To set a ringtone
1. From your Home screen, tap .
2. Find and tap Settings > Sound & notification > Phone ringtone.
3. Select an option from the list or tap + and select a music file that is saved on your device.
4. To confirm, tap Done.

To select the notification sound
1. From your Home screen, tap .
2. Find and tap Settings > Sound & notification > Notification sound.
3. Select an option from the list or tap + and select a music file that is saved on your device.
4. To confirm, tap Done.

- Some applications have their own specific notification sounds, which you can select from the application settings.

To enable touch tones
1. From your Home screen, tap .
2. Find and tap Settings > Sound & notification > Other sounds.
3. Tap the sliders to enable or disable the different touch tones as desired.

Do not disturb mode
You can set your device to Do not disturb mode and decide how long your device will be in Do not disturb mode manually. You can also preset when your device will be in Do not disturb mode automatically.

To activate Do not disturb mode
1. Drag the status bar fully downwards to access the Quick settings panel.
2. Find and tap .
3. Select an option, then tap Done.

To quickly shift between Do not disturb/Vibrate/Sound mode
1. Press the volume key up or down until or appears.
2. Tap or to quickly shift between Vibrate/Sound mode. To activate Do not disturb mode, press the volume key down when in vibrate mode.

To schedule Do not disturb mode time intervals
1. From your Home screen, tap .
2. Find and tap Settings > Sound & notification > Do not disturb> Automatic rules.
3. Select the time or event to schedule Do not disturb mode for, or add a new rule.
4. Enter the desired name for the rule, then tap OK.
5. Find and tap Days and mark the checkboxes for the relevant days, then tap Done.
6. To adjust the start time, tap Start time and select a value, then tap OK.
7. To adjust the end time, tap End time and select a value, then tap OK. Your device stays in Do not disturb mode during the selected time interval.
Setting exceptions for Do not disturb mode

You can select which types of notifications are allowed to sound in Do not disturb mode and you can filter exceptions based on who the notifications come from. The most common types of exceptions include:

* Events and reminders
* Calls
* Messages
* Alarms

To allow exceptions in Do not disturb mode

1. From the Home screen, tap 📴.
2. Find and tap Settings > Sound & notification > Do not disturb > Allowed in Priority only.
3. Tap the slider for the desired option.

To associate exceptions with specific contact types

1. From the Home screen, tap 📴.
2. Find and tap Settings > Sound & notification > Do not disturb > Allowed in Priority only.
3. Tap Calls or Messages.
4. Select an option.

Screen settings

To adjust the screen brightness manually regardless of lighting condition

1. From your Home screen, tap 📴.
2. Find and tap Settings > Display and tap the Adaptive brightness slider to disable this function, if it is not already disabled.
3. Tap Brightness level.
4. Drag the slider to adjust the brightness.

Lowering the brightness level helps the battery last longer.

To enable or disable vibrate on touch

1. From your Home screen, tap 📴.
2. Find and tap Settings > Sound & notification > Other sounds.
3. Tap the Vibrate on touch slider to enable or disable the function.

To adjust the idle time before the screen turns off

1. From your Home screen, tap 📴.
2. Find and tap Settings > Display > Sleep.
3. Select an option.

To turn off the screen quickly, briefly press the power key 🔒.

To adjust the font size

1. From your Home screen, tap 📴.
2. Find and tap Settings > Display > Font size.
3. Select the preferred option.

To adjust the white balance of the display

1. From your Home screen, tap 📴.
2. Find and tap Settings > Display > White balance.
3. Drag the sliders to the desired positions to adjust the white balance.

To revert the white balance setting back to its default values, tap Default values.
Smart backlight control

The smart backlight control keeps the screen on as long as the device is held in your hand. Once you put down the device, the screen turns off according to your sleep setting.

To enable or disable the Smart backlight control function
1. From your Home screen, tap \(\text{Home screen} \Rightarrow \).
2. Find and tap Settings > Display > Smart backlight control.
3. Tap the slider to enable or disable the function.

Glove mode

Using glove mode, you can wear gloves and still navigate the screen on your device. When you use glove mode, a cursor ring appears on the area of the screen where a touch is registered.

To enable glove mode
1. From your Home screen, tap \(\text{Home screen} \Rightarrow \) > Settings > Display.
2. Tap the Glove mode slider.

\(\text{Tip:}\) The sensitivity depends on the size of the contact area between the screen and the gloved finger that you use to navigate the screen.

Screen pinning

Use screen pinning to set your device to display only the screen for a specific application. For example, if you are playing a game and you accidentally touch the Home navigation key, the screen pinning feature prevents the active game app screen from being minimised. You can also use this feature when you lend your device to another person to make it harder for them to access more than one application. For example, you can lend your device to somebody to take a photo and pin the screen to the Camera application so that the person can’t easily use other apps such as Email.

\(\text{Caution:}\) Screen pinning is not a security feature and does not fully prevent other users from unpinning a screen and accessing your device. To protect your data, you should set up your device to request a screen lock PIN, password or pattern before someone can unpin the screen.

To enable or disable screen pinning
1. From your Home screen, tap \(\text{Home screen} \Rightarrow \).
2. Find and tap Settings > Lock screen & security > Screen pinning.
3. Tap the slider to enable or disable the function.
4. If you have enabled Screen pinning, you can tap the Lock device when unpinning slider to enable or disable this additional security function, as desired.

\(\text{Tip:}\) A pattern, PIN or password is not mandatory for screen pinning to work.

To pin a screen
1. Make sure that screen pinning is activated on your device.
2. Open an app and go to the screen that you want to pin.
3. Tap \(\text{Home screen} \Rightarrow \).
4. To display the screen pinning icon \(\text{Home screen} \Rightarrow \), swipe upwards.
5. Tap \(\text{Home screen} \Rightarrow \).
6. In the popup window that appears, tap Got it.
To unpin a screen
1. On the pinned screen, touch and hold □ and ◀ at the same time.
2. Release both buttons.

If you selected a security option when you activated the screen pinning function, you have to enter your pattern, PIN or password to unlock the device before the screen can be unpinned.

Application settings
Some apps will ask for permissions once you start using them. You can allow or deny permissions individually for each app, either from the Settings menu or from the Permission confirm dialog. Permission requirements depend on the app’s design.

Allowing or denying permissions
You can choose whether to allow or deny permissions when the dialog is shown. If you have used another Android version previously, most apps will have already been granted the necessary permissions.

To allow a permission
1. To allow a permission, tap Allow.
2. When the confirm dialog appears for the second time, you can choose the Never ask again option if you wish.
3. A dialog will also explain why the app needs the permissions and what it uses them for specifically. To dismiss this dialog, tap OK.

To deny a permission
• To deny a permission, tap Deny when the dialog is shown.
• Some applications can still be used even if you have denied permissions.

Critical permissions
Some permissions are mandatory for apps to work as intended. In such cases, a dialog will inform you.

To allow critical permissions
1. To allow a permission, tap Continue > App info > Permission.
2. Find the critical permission you need.
3. Tap the relevant slider to adjust permissions.

You can also manage permissions in Settings > Apps. Tap an app and change the permissions as desired.

To configure applications
1. From your Home screen, tap 📱.
2. Find and tap Settings > Apps > 📱.
3. Select a configuration option, for example App permissions, then choose an application that you want to configure.

Application linking
Your device can determine the default app to handle a particular web link. This means that if the link is set, you don’t need to select an app each time you open a link. You can change the default app any time you want.

To manage app links from the Settings menu
1. From your Home screen, tap 📱.
2. Find and tap Settings > Apps.
3. Tap 📱 and find App links.
4. Select an app, and adjust the settings as desired.
Resetting your applications

You can reset an application or clear application data if your application stops responding or causes issues with your device.

To reset application preferences
1. From your Home screen, tap Settings > Apps.
2. Tap , then tap Reset app preferences > Reset apps.

💡 Resetting application preferences does not delete any application data from your device.

To clear application data
1. From your Home screen, tap Settings > Apps.
2. Select an application or service, then tap Storage > CLEAR DATA > OK.

⚠️ When you clear application data, data for the selected application is deleted from your device permanently. The option to clear application data is not available for every application or service.

To clear application cache
1. From your Home screen, tap Settings > Apps.
2. Select an application or service, then tap Storage > CLEAR CACHE.

⚠️ The option to clear the application cache is not available for every application or service.

To clear the application default setting
1. From your Home screen, tap Settings > Apps.
2. Select an application or service, then tap Open by default > CLEAR DEFAULTS.

⚠️ The option to clear the application default setting is not available for every application or service.

Daydream

Daydream is an interactive screen saver that automatically displays colours, photos or a slideshow while your device is docked or charging and the screen is idle.

💡 On a device with multiple users, each user can have individual Daydream settings.

To enable or disable the Daydream screen saver
1. From your Home screen, tap Settings > Apps.
2. Tap the slider to enable or disable the function.

To select content for the Daydream screen saver
1. From your Home screen, tap Settings > Apps.
2. Tap the slider to enable the function.
3. Select what you want to display when the screen saver is active.

To start the Daydream screen saver manually
1. From your Home screen, tap Settings > Apps.
2. Tap the slider to enable the function.
3. To activate the Daydream screen saver immediately, tap , then tap Start now.
Language settings
You can select a default language for your device and change it again at a later time. You can also change the writing language for text input.

To change the language
1. From the Home screen, tap 📲.
2. Find and tap Settings > Language & input > Language.
3. Select an option.
4. Tap OK.

⚠️ If you select the wrong language and cannot read the menu texts, find and tap 📲. Then select the text beside 📲 and select the first entry in the menu that opens. You can then select the language you want.

Date and time
You can change the date and time on your device.

To set the date manually
1. From the Home screen, tap 📲.
2. Find and tap Settings > Date & time.
3. Disable the Automatic date & time function by tapping the slider.
4. Tap Set date.
5. Flick left or right, or use the arrows to set the desired date.
6. Tap OK.

To set the time manually
1. From your Home screen, tap 📲.
2. Find and tap Settings > Date & time.
3. Disable the Automatic date & time function by tapping the slider.
4. Tap Set time.
5. Select the relevant values for the hour and minute.
6. Tap OK.

To set the time zone
1. From your Home screen, tap 📲.
2. Find and tap Settings > Date & time.
3. Disable the Automatic time zone function by tapping the slider.
4. Tap Select time zone.
5. Select an option.

X-Reality™ for mobile
Sony’s X-Reality™ for mobile technology improves the viewing quality of photos and videos, giving you clearer, sharper and more natural images. X-Reality™ for mobile is turned on by default, but you can turn it off if you want to reduce battery consumption.

To turn on X-Reality™ for mobile
1. From your Home screen, tap 📲.
2. Find and tap Settings > Display > Image enhancement.
3. Tap the X-Reality for mobile radio button if it is not already selected.

Super-vivid mode
Super-vivid mode enhances the colour brightness and saturation of your photos and videos while you view them on your device.
To turn on Super-vivid mode
1. From your Home screen, tap 📱.
2. Find and tap Settings > Display > Image enhancement.
3. Tap the Super-vivid mode radio button if it is not already selected.

Enhancing the sound output
You can enhance the sound of your device by manually enabling individual sound settings such as Equaliser and Surround sound. You can enable the Dynamic normaliser to minimise volume differences between songs or videos. You can also improve the quality of compressed music files to near High-resolution Audio quality when you are using a wired headphone.

To enhance the sound output automatically
1. From your Home screen, tap 📱.
2. Find and tap Settings > Sound & notification > Audio settings.
3. Enable the ClearAudio+ function by tapping the slider.

To adjust the sound settings manually
1. From the Home screen, tap 📱.
2. Find and tap Settings > Sound & notification > Audio settings.
3. Drag the slider beside ClearAudio+ to the left.
4. Tap Sound effects > Equaliser.
5. Adjust the sound settings by dragging the frequency band buttons up or down.

⚠️ The manual adjustment of sound output settings has no effect on voice communication applications. For example, there is no change in the voice call sound quality.

To minimise volume differences using the Dynamic normaliser
1. From your Home screen, tap 📱.
2. Find and tap Settings > Sound & notification > Audio settings.
3. Disable the DSEE HX function by tapping the slider, if it is enabled.
4. Enable the Dynamic normaliser function by tapping the slider.

To upgrade the quality of compressed music files
1. From your Home screen, tap 📱.
2. Find and tap Settings > Sound & notification > Audio settings.
3. Enable the DSEE HX function by tapping the slider.

⚠️ This setting is only available for wired headphones that support High-resolution Audio.

Noise cancellation
Your device supports noise cancelling headsets. By using a noise cancelling headset with your device, you can get much clearer audio quality when listening, for example, to music in a noisy environment, such as on a bus, a train or a plane. You can also use this feature to create a silent environment in which to study, work or read.

⚠️ To ensure optimal performance, noise cancelling headsets from Sony are recommended.
To use a noise cancelling headset

1. Connect the noise cancelling headset to your device.
2. From your Home screen, find and tap @ > Settings > Sound & notification > Accessory settings > Noise cancelling, then enable the Noise cancelling function by tapping the slider.
3. Tap Headset/Headphone type, and select the type of your headset/headphone.
4. If you want Noise cancelling to be enabled only during music or video playback or when the screen is active, tap the Power saver mode slider to enable this function.
5. If you want Noise cancelling to be enabled for as long as the headset is connected, tap the Power saver mode slider to disable this function.

A noise cancelling headset may not be included with your device at purchase.

You can also enable the Noise cancelling function via the Quick settings panel when a noise cancelling headset is connected to your device.

To adjust the settings to the noise environment

1. Make sure a noise cancelling headset is connected to your device.
2. From your Home screen, tap @.
3. Find and tap Settings > Sound & notification > Accessory settings > Noise cancelling > Noise environment.
4. Select the relevant noise environment type, then tap OK.

Multiple user accounts

Your device supports multiple user accounts so that different users can log in separately to the device and use it. Multiple user accounts work well in situations where you share the same device with other people or lend your device to someone to use for a while. The user who sets up the device for the first time becomes the owner of the device. Only the owner can manage the accounts of other users. Apart from the owner account, there are two different types of accounts:

- Regular User: This account type is suitable for someone who regularly uses your device.
- Guest User: Enable the guest account option for someone who just wants to use your device temporarily.

Some features are only available to the owner. For example, only the owner can allow downloads from sources other than Google Play™.

About the Regular User account

By adding Regular User accounts, you can allow different users to have different home screens, wallpapers and general settings. They also get separate access to applications and memory storage for files such as music and photos. You can add up to seven regular user accounts on your device.

To add a regular user account

1. Make sure you are logged in as the owner, that is, the user who set up the device for the first time.
2. From your Home screen, tap @.
3. Find and tap Settings > Users > Add user.
4. Tap OK. The new account is created.
5. Tap SET UP NOW. The screen locks and an icon representing the newly added user appears in the top right corner.
6. Unlock the screen by swiping upwards.
7. Follow the on-screen instructions to set up the account for the user.

You can also add a regular user account from the status bar on any screen. Just drag the status bar fully downwards and tap the user icon, then tap Add user.
To delete a regular user account from your device
1. Make sure you are logged in as the owner.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Users.
4. Tap ⚪️ beside the name of the user that you want to delete, then tap Remove user > Delete.

About the Guest User account
If someone just wants to use your device temporarily, you can enable a guest account for this user. In guest mode, your device starts up as a freshly installed system with only the pre-installed apps. Once your guest is finished using your device, you can wipe the session clean so that the next guest can start fresh. The guest user account is pre-installed and cannot be deleted.

To activate the guest user account
1. Make sure you are logged in as the owner, that is, the user who set up the device for the first time.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Users > Guest.
   ✰ You can also activate the guest user account from the status bar on any screen. Just drag the status bar fully downwards and tap the user icon, then tap Add guest.

To clear the guest session data
1. Make sure you are logged in to the guest account.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Users.
4. Find and tap Remove guest.
5. Tap Remove.
   ✰ You can also clear the guest session from the status bar on any screen as long as you are logged in to the guest account. Just drag the status bar downwards and tap the user icon, then tap Remove guest.

Switching between multiple user accounts

To switch between multiple user accounts
1. To view the list of users, drag the status bar downwards, then tap the user icon at the top right of the screen.
2. Tap the icon representing the user account that you want to switch to. The lock screen for that user account appears.
   ✰ When you switch to the guest account, tap Start again if you want to wipe the previous session or tap Yes, continue to continue the previous session.

Settings for multiple user accounts

There are three different types of settings on devices with multiple users:
- Settings that can be changed by any user and affect all users. Examples include language, Wi-Fi®, Airplane mode, NFC and Bluetooth®.
- Settings that only affect an individual user account. Examples include automatic data syncing, screen lock, various accounts added, and wallpaper.
- Settings that are only visible to the owner and affect all users, for example, VPN settings.
Typing text

On-screen keyboard

SwiftKey® is the default text entry provider. You can enter text using the on-screen keyboard by tapping each letter individually, or you can use the SwiftKey® flow feature and slide your finger from letter to letter to form words.

You can personalise SwiftKey® settings by accessing SwiftKey® Keyboard from the Application screen.

1. Delete a character before the cursor.
2. Tap to enter a carriage return, or touch and hold to access smileys.
3. Enter punctuation.
4. Enter a space.
5. Tap to enter a comma, or touch and hold to enter text using voice input.
6. Display numbers and symbols.
7. Switch between lower case, upper case and all caps.

For more information about SwiftKey®, go to https://swiftkey.com/

To display the on-screen keyboard to enter text
* Tap a text entry field.

To use the on-screen keyboard in landscape orientation
* When the on-screen keyboard is displayed, turn the device sideways.

You may need to adjust the settings in some applications to enable landscape orientation.

To enter text character by character
1. To enter a character visible on the keyboard, tap the character.
2. To enter a character variant, touch and hold a regular keyboard character to get a list of available options, then select from the list. For example, to enter “é”, touch and hold “e” until other options appear, then, while keeping your finger pressed on the keyboard, drag to and select “é”.

To enter a period
* After you enter a word, double-tap the space bar.

To enter text using the SwiftKey® Flow input function
1. When the on-screen keyboard is displayed, slide your finger from letter to letter to trace the word that you want to write.
2. After you finish entering a word, lift up your finger. A word suggestion appears based on the letters that you have traced.
3. If the word that you want does not appear, tap ☓ to see other options and select accordingly. If the desired option does not appear, delete the entire word and trace it again, or enter the word by tapping each letter individually.
Editing text
You can select, cut, copy and paste text as you write. You can access the editing options by double-tapping the entered text. The editing options then become available via an application bar.

Text editing bar
After selecting text by double-tapping on a word, an editing bar appears with several tools available:

- **Cut**
- **Copy**
- **Paste**
- **Share**
- **Select all**
- **Assist**

The **Paste** option only appears when you have text saved on the clipboard.

**To select text**
1. Double-tap a word to highlight it.
2. You can drag the tabs on both sides of the highlighted word to select more text.

**To edit text**
1. Double-tap a word to make the application bar appear.
2. Select the text that you want to edit, then use the application bar to make your desired changes.

**To use the magnifier**
- When you enter text, tap and hold on the text field to view the text magnified and to place the cursor where you want within the text field.
Calling

Making calls

You can make a call by manually dialling a phone number, by tapping a number saved in your contacts list, or by tapping the phone number in your call log. You can also use the smart dial function to quickly find numbers from your contacts list and call logs by entering part of a contact number or name and selecting from the suggestions that appear. To make a video call, you can use the Hangouts™ instant messaging and video chat application on your device. See Instant messaging and video chat on page 75.

To open the dialpad

1. From your Home screen, tap 📞.
2. Find and tap 📞.
3. If the dialpad does not appear, tap 📞.

To dial a phone number

1. From your Home screen, tap 📞.
2. Find and tap 📞.
3. If the call log appears, tap 📞 to display the dialpad.
4. Enter the phone number, and tap 📞.
5. To delete a number entered by mistake, tap 📞.

To make a call using smart dial

1. From your Home screen, tap 📞.
2. Find and tap 📞.
3. If the call log appears, tap 📞 to display the dialpad.
4. Use the dialpad to enter letters or numbers that correspond to the contact you want to call. As you enter each letter or number, a list of possible matches appears.
5. Tap the contact that you want to call.
To make an international call
1. From your Home screen, tap .
2. Find and tap . The call log is displayed.
3. Tap to display the dialpad.
4. Touch and hold 0 until a “+” sign appears.
5. Enter the country code, the area code without the initial zeros, followed by the phone number. Then tap .

To add a direct dial number to your Home screen
1. Touch and hold an empty area on your Home screen until the device vibrates and the customisation menu appears.
2. In the customisation menu, tap Widgets > Shortcuts.
3. Scroll through the list of applications and select Direct dial.
4. Select the contact and the number that you want to use as the direct dial number.

Showing or hiding your phone number
You can select to show or hide your phone number on call recipients' devices when you call them.

To show or hide your phone number during outgoing calls
1. From the Home screen, tap .
2. Find and tap Settings > Call > Additional settings > Caller ID, and choose an option.
   ! This option may not be provided by every operator.

Receiving calls
If you receive an incoming call when the device is in sleep mode or the screen is locked, the phone application opens in fullscreen format. If you receive an incoming call when the screen is active, the incoming call is displayed as a floating notification, that is, in a minimised window that floats at the top of whatever screen is open. When such a notification arrives, you can choose to answer the call and open the phone application screen, or you can reject the call and stay on the current screen.

To answer a call when the screen is inactive
* When a call comes in, drag to the right.

To answer an incoming call when the screen is active
* When a call comes in, in the heads-up notification that appears at the top of the screen, tap ANSWER.
   ✨ Instead of answering the call, you can go to the main phone application screen by tapping the upper part of the heads-up notification window. Using this method, you get more options to manage the call. For example, you can decide to reject the call with a message or forward the call to Voicemail.

To reject a call when the screen is inactive
* When a call comes in, drag to the left.

To reject a call when the screen is active
* When a call comes in, in the heads-up notification that appears at the top of the screen, tap DECLINE.
   ✨ Instead of rejecting the call, you can go to the main phone application screen by tapping the upper part of the heads-up notification window. In this way you get more options to manage the call. For example, you can decide to reject the call with a message.
To mute the ringtone for an incoming call
• When you receive the call, press the volume key.

Rejecting a call with a text message
You can reject a call with a text message, sent automatically to the caller and stored in the Messaging conversation with the contact.
You can select from a number of predefined messages available on your device, or you can create a new message. You can also create your own personalised messages by editing the predefined ones.

To reject a call with a text message when the screen is inactive
1 When an incoming call arrives, tap Response options.
2 Select a predefined message or tap Write new message.

To reject a call with a text message when the screen is active
1 When an incoming call arrives, tap the upper part of the heads-up notification window where the phone number or the name of the contact is displayed.
2 Tap Response options.
3 Select a predefined message or tap Write new message.

To reject a second call with a text message
1 When you hear repeated beeps during a call, tap Response options.
2 Select a predefined message or tap Write new message.

To edit the text message used to reject a call
1 From your Home screen, tap 📞.
2 Find and tap Settings > Call > Reject call with message.
3 Tap the message that you want to edit, then make the necessary changes.
4 Tap OK.

Smart call handling
You can handle incoming calls without touching the screen by turning on the Smart call handling function. Once activated, you can handle calls in the following way:
• Answer: bring the device to your ear.
• Reject: shake the device.
• Ringer off: place the device face down.

To turn on Smart call handling
1 From your Home screen, tap 📞.
2 Find and tap Settings > Call.
3 Tap Smart call handling.
4 Tap the slider under Smart call handling.
Ongoing calls

- End a call
- Make a second call
- Put the current call on hold or retrieve a call on hold
- Enter DTMF digits during a call
- Mute the microphone during a call
- Turn on the loudspeaker during a call

To change the ear speaker volume during a call

* Press the volume key up or down.

Using the call log

In the call log, you can view missed calls ✅ received calls ✅ and dialled calls ✖.

To open the call log

1. From your Home screen, tap ✅.
2. Find and tap ✅.

To view your missed calls

1. When you have missed a call, ✅ appears in the status bar. Drag the status bar downwards.
2. Tap Missed call.

To call a number from your call log

1. From your Home screen, tap ✅.
2. Find and tap ✅. The call log is displayed.
3. To call a number directly from the call log, tap the number. To edit a number before calling, touch and hold the number, then tap Edit number before call.

To add a number from the call log to your contacts

1. Touch and hold a number displayed in the call log, then tap Add to a contact.
2. Select an existing contact to which you want to add the number, or tap Create new contact.
3. Edit the contact details, then tap SAVE.
To view call log options
1. From your Home screen, tap 📷.
2. Find and tap 📷.
3. Tap 📷.
- You can also access general call settings by following the steps above.

Forwarding calls
You can direct calls to a different recipient, for example, to another phone number or another device.

To forward calls
1. From your Home screen, tap 📷.
2. Find and tap Settings > Call.
3. Tap Call forwarding and select an option.
4. Enter the number you want to forward calls to, then tap Turn on.

To turn off call forwarding
1. From your Home screen, tap 📷.
2. Find and tap Settings > Call > Call forwarding.
3. Select an option, then tap Turn off.

Restricting calls
You can block all or certain categories of incoming and outgoing calls. If you have received a PIN2 code from your service provider, you can also use a list of Fixed Dialling Numbers (FDNs) to restrict outgoing calls. If your subscription includes a voicemail service, you can send all incoming calls from a specific contact directly to voicemail. If you want to block a certain number, you can go to Google Play™ and download applications that support this function.

- FDN is not supported by all network operators. Contact your network operator to verify if your SIM card or network service supports this feature.

To block incoming or outgoing calls
1. From your Home screen, tap 📷.
2. Find and tap Settings > Call.
3. Tap Call Barring, then select an option.
4. Enter the password and tap Turn on.
- When you set up call barring for the first time, you need to enter a password. You must use this same password later if you want to edit call barring settings.

To enable or disable fixed dialling
1. From your Home screen, tap 📷.
2. Find and tap Settings > Call > Fixed dialling numbers.
3. Tap Activate fixed dialling or Deactivate fixed dialling.
4. Enter your PIN2 and tap OK.

To access the list of accepted call recipients
1. From your Home screen, tap 📷.
2. Find and tap Settings > Call.
3. Tap Fixed dialling numbers > Fixed dialling numbers.
To change the SIM card PIN2
1. From the Home screen, tap 📞.
2. Find and tap Settings > Call.
3. Tap Fixed dialling numbers > Change PIN2.
4. Enter the old SIM card PIN2 and tap OK.
5. Enter the new SIM card PIN2 and tap OK.
6. Confirm the new PIN2 and tap OK.

To send incoming calls from a specific contact directly to voicemail
1. From your Home screen, tap 📞.
2. Find and tap 📞.
3. Select the desired contact.
4. Tap 📞 > 📷.
5. Mark the checkbox beside All calls to voicemail.
6. Tap SAVE.

Multiple calls
If you have activated call waiting, you can handle multiple calls at the same time. When it is activated, you will be notified by a beep if you receive another call.

To activate or deactivate call waiting
1. From your Home screen, tap 📞.
2. Find and tap 📞 in Additional settings.
3. To activate or deactivate call waiting, tap Call waiting.

To answer a second call and put the ongoing call on hold
1. When you hear repeated beeps during a call, drag ✑ to the right.
2. Tap Hold call.

To reject a second call
• When you hear repeated beeps during a call, drag ✑ to the left.

To make a second call
1. During an ongoing call, tap 📷. The call log is displayed.
2. Tap ✑ to display the dialpad.
3. Enter the number of the recipient and tap 📷. The first call is put on hold.

To switch between multiple calls
• To switch to another call and put the current call on hold, tap On hold.

Conference calls
With a conference or multiparty call, you can have a joint conversation with two or more persons.

⚠️ For details about the number of participants that you can add to a conference call, contact your network operator.

To make a conference call
1. During an ongoing call, tap 📷. The call log appears.
2. To display the dialpad, tap ✑.
3. Dial the number of the second participant and tap 📷. The first participant is put on hold temporarily.
4. To add the second participant to the call and start the conference call, tap ✑.
5. To add more participants to the call, repeat the relevant steps as described above.
To have a private conversation with a conference call participant
1. During an ongoing conference call, tap Manage conference.
2. Tap the telephone number of the participant with whom you want to have a private conversation.
3. To end the private conversation and return to the conference call, tap  

To release a participant from a conference call
1. During an ongoing conference call, tap Manage conference.
2. Tap next to the participant you want to release.

To end a conference call
* During the conference call, tap  

Voicemail
If your subscription includes a voicemail service, callers can leave voice messages for you when you can't answer calls. Your voicemail service number is normally saved on your SIM card. If not, you can get the number from your service provider and enter it manually.

To enter your voicemail number
1. From the Home screen, tap  
2. Find and tap Settings > Call > Voicemail > Voicemail settings > Voicemail number.
3. Enter your voicemail number.
4. Tap OK.

To call your voicemail service
1. Open the dialpad.
2. Touch and hold 1 until your voicemail number is dialed.
   ✱ The first time you call your voicemail number, your network operator's voicemail system normally prompts you to set up your voicemail. For example, you may be asked to record a greeting and set a password.

Emergency calls
Your device supports international emergency numbers, for example, 112 or 911. You can normally use these numbers to make emergency calls in any country, with or without a SIM card inserted if you are within range of a network.

To make an emergency call
1. Open the dialpad.
2. Enter the emergency number, then tap  
   ✱ You can make emergency calls even when no SIM card is inserted or when all outgoing calls are blocked.

To make an emergency call while the SIM card is locked
1. Tap Emergency call.
2. Enter the emergency number and tap  

To make an emergency call while the screen is locked
1. If the active screen lock type is Swipe, tap  to display the dialpad, then enter the emergency number and tap  
2. If your screen is locked with a pattern, PIN or password, tap Emergency call, then enter the emergency number and tap  

65
Contacts

Transferring contacts

There are several ways to transfer contacts to your new device. You can sync contacts from an online account or import contacts directly from another device.

Transferring contacts using a computer

Xperia™ Transfer is an application that helps you to collect contacts from your old device and transfer them to your new device. Xperia™ Transfer, which you can access from within the Xperia™ Companion software, supports mobile devices that run on iOS/iCloud and Android™. If you are switching from an iOS device, the App Matching feature suggests the Android equivalents of your iOS apps.

To use Xperia™ Transfer, you need:

- An Internet-connected computer.
- Your new Android™ device.
- A USB Type-C™ cable for your new Android™ device.
- Your old device.
- A USB cable compatible with your old device.

You may not need your old device. For iOS devices, you can connect directly to iCloud or use a local backup. For previously owned Sony devices you can use local backups.

To transfer contacts to your new device

2. Using a USB Type-C™ cable, connect your device to the computer.
3. After successful installation, open the Xperia™ Companion software if it is not automatically launched, then click Xperia™ Transfer and follow the relevant instructions to transfer your contacts.

Transferring contacts using an online account

If you sync the contacts in your old device or your computer with an online account, for example, Google Sync™, Facebook™ or Microsoft® Exchange ActiveSync®, you can transfer your contacts to your new device using that account.

To synchronise contacts on your new device with a synchronisation account

1. From your Home screen, tap , then tap .
2. Tap , then tap Settings > Accounts & sync.
3. Select the account that you want to sync your contacts with, then tap > Sync now.

You need to be signed in to the relevant sync account before you can sync your contacts with it.

Other methods for transferring contacts

There are several other ways to transfer contacts from your old device to your new device. For example, you can copy contacts to a memory card, use Bluetooth® technology, or save contacts to a SIM card. For more specific information about transferring the contacts from your old device, refer to the relevant User guide.
To import contacts from a memory card

1. From your Home screen, tap , then tap .
2. Press ; then tap Import contacts > SD card.
3. Select where to store your contacts.
4. Select the files that you want to import and tap OK.

To import contacts using Bluetooth® technology

1. Make sure you have the Bluetooth® function turned on and that your device is set to visible.
2. When you are notified of an incoming file to your device, drag the status bar downwards and tap the notification to accept the file transfer.
3. Tap Accept to start the file transfer.
4. Drag the status bar downwards. When the transfer is complete, tap the notification.
5. Tap the received file and select where to store your contacts.

To import contacts from a SIM card

! You may lose information or get multiple contact entries if you transfer contacts using a SIM card.

1. From your Home screen, tap , then tap .
2. Tap , then tap Import contacts > SIM card.
3. Select where to store your contacts.
4. To import an individual contact, find and tap the contact. To import all contacts, tap Import all.

Searching and viewing contacts

![Contacts screenshot]

1. Search for contacts
2. View more options
3. Contacts, Favourites and Groups tabs
4. Edit and view medical and emergency contact information
5. View contact details
6. Jump to contacts starting with the selected letter
7. Add a contact

To search for a contact

1. From your Home screen, tap , then tap .
2. Tap and enter a phone number, name or other information in the Search contacts field. The result list is filtered as you enter each character.
To select which contacts to display in the Contacts application

1. From your Home screen, tap 📱, then tap 📱.
2. Press 🔍, then tap Filter.
3. In the list that appears, mark or unmark the desired options. If you have synchronised your contacts with a synchronisation account, that account appears in the list. To further expand the list of options, tap the account.

Adding and editing contacts

To add a contact

1. From your Home screen, tap 📱, then tap 📱.
2. Tap 📱.
3. If you have synchronised your contacts with one or more accounts and you are adding a contact for the first time, you must select the account that you want to add the contact to. Alternatively, tap No backup if you only want to use and save this contact on your device.
4. Enter or select the desired information for the contact.
5. When you are finished, tap SAVE.

- Once you save a contact to an account, that account will show as the default account to save to the next time you add a contact. If you want to change which account a contact is saved to, you need to create the contact again and save it to the correct account.

- If you add a plus sign and the country code before a contact’s phone number, you do not have to edit the number again when you make calls from abroad.

To edit a contact

1. From your Home screen, tap 📱, then tap 📱.
2. Tap the contact that you want to edit, then tap 📱.
3. Edit the desired information.
4. When you are finished, tap SAVE.

- Some synchronisation services do not allow you to edit contact details.

To add a picture to a contact

1. From your Home screen, tap 📱, then tap 📱.
2. Tap the contact that you want to edit, then tap 📱.
3. Tap 📱, then select a method for adding the contact picture and edit it as desired.
4. After you add the picture, tap SAVE.

- You can also add a picture to a contact directly from the Album application. If you want to add a picture that is saved to an online account, you must download the picture first.

To personalise the ringtone for a contact

1. From your Home screen, tap 📱, then tap 📱.
2. Tap the contact that you want to edit, then tap 📱.
3. Tap 📱 > Set ringtone.
4. Select an option from the list or tap 👈 to select a music file saved on your device, then tap Done.
5. Tap SAVE.

To delete contacts

1. From your Home screen, tap 📱, then tap 📱.
2. Touch and hold the contact that you want to delete.
3. To delete all contacts, tap the downwards arrow to open the drop-down menu, then select Mark all.
4. Tap ✗, then tap Delete.
To edit contact information about yourself
1. From your **Home screen**, tap ☰, then tap ☰.
2. Tap **Myself**, then tap ☰.
3. Enter the new information or make the changes you want.
4. When you are finished, tap SAVE.

To create a new contact from a text message
1. From your **Home screen**, tap ☰, then tap ☰.
2. Tap the icon next to the phone number, then tap ☰.
3. Select an existing contact, or tap **Create new contact**.
4. Edit the contact information and tap SAVE.

Adding medical and emergency contact information
You can add and edit ICE (In Case of Emergency) information in the Contacts application. You can enter medical details, such as allergies and medications that you are using, plus information about relatives and friends who can be contacted in case of emergency. After setup, your ICE information can be accessed from the security lock screen. This means that even if the screen is locked, for example, by a PIN, pattern or password, emergency personnel can still retrieve your ICE information.

1. Go back to the main Contacts screen
2. View more options
3. Show your medical and personal information as part of the ICE information
4. Medical information
5. ICE contact list
6. Create new ICE contacts
7. Use existing contacts as ICE contacts

To show your medical and personal information as part of the ICE information
1. From your **Home screen**, tap ☰, then tap ☰.
2. Tap **ICE – In Case of Emergency**.
3. Tap ☰, then mark the **Show personal information** checkbox.

To enter your medical information
1. From your **Home screen**, tap ☰, then tap ☰.
2. Tap **ICE – In Case of Emergency**.
3. Tap ☰, then tap **Edit medical info**.
4. Edit the desired information.
5. When you are finished, tap SAVE.
To add a new ICE contact
1. From your Home screen, tap , then tap .
2. Tap ICE – In Case of Emergency, then tap .
3. If you have synchronised your contacts with one or more accounts and you are adding the contact for the first time, you must select the account that you want to add the contact to. Alternatively, tap No backup if you only want to use and save this contact on your device.
4. Enter or select the desired information for the contact.
5. When you are finished, tap SAVE.

! The ICE contact must have at least a phone number which emergency personnel can call. If your device is locked by a security screen lock, emergency personnel can only see the phone number of the ICE contact, even if there is other information entered in the Contacts application.

To use existing contacts as ICE contacts
1. From your Home screen, tap , then tap .
2. Tap ICE – In Case of Emergency, then tap .
3. Mark the contacts that you want to use as ICE contacts.
4. When you are finished, tap Done.

! The ICE contacts that you select must have at least a phone number which emergency personnel can call. If your device is locked by a security screen lock, emergency personnel can only see the phone number of the ICE contacts, even if there is other information entered in the Contacts application.

To make your ICE information visible from the security lock screen
1. From your Home screen, tap , then tap .
2. Tap ICE – In Case of Emergency.
3. Tap , then tap Settings.
4. Mark the ICE in lock screen checkbox.

! Your ICE information is visible from the security lock screen by default.

To enable calls to ICE contacts from the security lock screen
1. From your Home screen, tap , then tap .
2. Tap ICE – In Case of Emergency.
3. Tap , then tap Settings.
4. Mark the Enable calling in ICE checkbox.

! Some networks or service providers may not support ICE calls.

Favourites and groups
Contacts that you mark as favourites appear under the favourites tab in the Contacts application along with your most frequently called contacts or “top contacts”. This way you get quicker access to these contacts. You can also assign contacts to groups, to get quicker access to a group of contacts from within the Contacts application.

To mark or unmark a contact as a favourite
1. From the Home screen, tap , then tap .
2. Tap the contact you want to add to or remove from your favourites.
3. Tap .

To view your favourite contacts
1. From your Home screen, tap , then tap .
2. Tap Favourites.
To assign a contact to a group
1. In the Contacts application, tap the contact that you want to assign to a group.
2. Tap , then tap the bar directly under Groups.
3. Mark the checkboxes for the groups that you want to add the contact to.
4. Tap SAVE.

Sending contact information

To send your business card
1. From your Home screen, tap , then tap .
2. Tap Myself.
3. Tap , then tap Share.
4. Select an available transfer method and follow the on-screen instructions.

To send a contact
1. From your Home screen, tap , then tap .
2. Tap the contact whose details you want to send.
3. Tap , then tap Share.
4. Select an available transfer method and follow the on-screen instructions.

To send several contacts at once
1. From your Home screen, tap , then tap .
2. Press , then tap Mark several.
3. Mark the contacts you want to send, or select all if you want to send all contacts.
4. Tap , then select an available transfer method and follow the on-screen instructions.

Avoiding duplicate entries in the Contacts application

If you synchronise your contacts with a new account or import contact information in other ways, you could end up with duplicate entries in the Contacts application. If this happens, you can join such duplicates to create a single entry. And if you join entries by mistake, you can separate them again later.

To link contacts
1. From your Home screen, tap , then tap .
2. Tap the contact that you want to link with another contact.
3. Press , then tap Link contact.
4. Tap the contact whose information you want to join with the first contact, then tap OK to confirm. The information from the first contact is merged with the second contact, and the linked contacts are displayed as one contact in the Contacts list.

To separate linked contacts
1. From your Home screen, tap , then tap .
2. Tap the linked contact that you want to edit, then tap .
3. Tap Unlink contact > Unlink.

Backing up contacts

You can use internal storage, a memory card or a SIM card to back up contacts. See Transferring contacts on page 66 for more information about how to restore contacts to your device.
To export all contacts to a memory card

1. From your Home screen, tap , then tap .
2. Press ; then tap Export contacts > SD card.
3. Tap OK.

To export contacts to a SIM card

When you export contacts to a SIM card, not all information may get exported. This is due to memory limitations on SIM cards.

1. From your Home screen, tap , then tap .
2. Press ; then tap Export contacts > SIM card.
3. Mark the contacts you want to export, or tap Mark all if you want to export all your contacts.
4. Tap Export.
5. Select Add contacts if you want to add the contacts to the existing contact list on your SIM card, or select Replace all contacts if you want to replace the existing contact list on your SIM card.
Messaging and chat

Reading and sending messages

The Messaging application shows your messages as conversations, which means that all messages to and from a particular person are grouped together. To send multimedia messages, you need the correct MMS settings on your device. See Internet and MMS settings on page 37.

The number of characters that you can send in a single message varies depending on the operator and the language you use. The maximum size of a multimedia message, which includes the size of added media files, is also operator dependent. Contact your network operator for more information.

From your +RPHVFUHHQ, tap $DQG, then find and tap $DQG. Tap $DQG. Enter the recipient’s name or phone number, or other contact information that you have saved about the recipient, then select from the list that appears. If the recipient is not listed as a contact, enter the recipient’s number manually. If you want to send a group message, repeat the procedure described above to add more recipients. Tap Write message and enter your message text. If you want to add an attachment, select the relevant attachment option. To send the message, tap $DQG.

If you exit a message before sending, it gets saved as a draft. The conversation gets tagged with the word Draft.

To read a received message

1. From your Home screen, tap $DQG, then find and tap $DQG.
2. Tap the desired conversation.
3. If the message is not yet downloaded, tap it.

All received messages are saved by default to the device memory.
To reply to a message
1. From your Home screen, tap  
   then find and tap  
2. Tap the conversation containing the message.
3. Enter your reply and tap  

To forward a message
1. From your Home screen, tap  
   then find and tap  
2. Tap the conversation containing the message that you want to forward.
3. Touch and hold the message that you want to forward, then tap Forward message.
4. Enter the recipient’s name or phone number, or other contact information that you have saved about the recipient, then select from the list that appears. If the recipient is not listed as a contact, enter the recipient’s number manually.
5. Edit the message, if necessary, then tap  

To save a file contained in a received message
1. From your Home screen, tap  
   then find and tap  
2. If the message has not been downloaded yet, tap it.
3. Touch and hold the file that you want to save, then select the desired option.

Organising your messages

To delete a message
1. From your Home screen, tap  
   then find and tap  
2. Tap the conversation containing the message that you want to delete.
3. Touch and hold the message that you want to delete, then tap Delete message > Delete.

To delete conversations
1. From your Home screen, tap  
   then find and tap  
2. Tap  
   then tap Delete conversations.
3. Mark the checkboxes for the conversations that you want to delete, then tap  
   > Delete.

To star a message
1. From your Home screen, tap  
   then find and tap  
2. Tap the conversation that you want to open.
3. Touch and hold the message that you want to star, then tap Add star.
4. To unstar a message, touch and hold the starred message, then tap Delete star.

To view starred messages
1. From your Home screen, tap  
   then find and tap  
2. Tap  
   then tap Starred messages.
3. All starred messages appear in a list.

To search for messages
1. From your Home screen, tap  
   then find and tap  
2. Tap  
3. Enter your search keywords. The search results appear in a list.

Calling from Messaging

To call a message sender
1. From your Home screen, tap  
   then find and tap  
2. Tap a conversation, then tap  

This is an Internet version of this publication. © Print only for private use.
To save a sender's number as a contact
1. From your Home screen, tap ☐, then find and tap ☐.
2. Tap the icon next to the phone number, then tap Save.
3. Select an existing contact, or tap Create new contact.
4. Edit the contact information and tap Save.

**Messaging settings**

To change your message notification settings
1. From your Home screen, tap ☐, then find and tap ☐.
2. Tap ☐, then tap Settings.
3. To set a notification sound, tap Notification sound, then select an option or tap the icon and select a music file that is saved on your device.
4. To confirm, tap Done.
5. To adjust additional notification settings, tap the sliders.

To enable or disable delivery reports for outgoing messages
1. From your Home screen, tap ☐, then find and tap ☐.
2. Tap ☐, then tap Settings.
3. Tap the Delivery report slider to enable or disable the function.

After delivery reports are turned on, a check mark is displayed in messages that have been successfully delivered.

**Instant messaging and video chat**

You can use the Google Hangouts™ instant messaging and video chat application on your device to chat with friends who also use the application on computers, Android™ devices and other devices. You can turn any conversation into a video call with several friends, and you can send messages to friends even when they are offline. You can also view and share photos easily.

Hangouts™ requires Internet access and a Google™ account. Go to http://support.google.com/hangouts and click the “Hangouts on your Android” link to get more detailed information about how to use this application.

The video call function only works on devices with a front camera.

To use the Hangouts™ application
1. From your Home screen, tap ☐.
2. Find and tap Hangouts.
Email

Setting up email

Use the email application on your device to send and receive email messages through your email accounts. You can have one or several email accounts at the same time, including corporate Microsoft Exchange ActiveSync accounts.

To set up an email account

1. From your Home screen, tap Email.
2. Find and tap Email.
3. Follow the instructions that appear on the screen to complete the setup.

! For some email services, you may need to contact your email service provider for information on detailed settings for the email account.

To add an extra email account

1. From your Home screen, tap Email.
2. Find and tap Email.
3. Tap ; then tap Settings > Add account.
4. Follow the on-screen instructions. If the settings for the email account cannot be downloaded automatically, complete the setup manually.
5. When you are finished, tap Next.

Sending and receiving email messages

1. View a list of all email accounts and recent folders
2. Search for email messages
3. Access settings and options
4. List of email messages
5. Write an email message

To download new email messages

- When the email inbox is open, swipe downwards on the message list.

! Before trying to download new email messages, make sure that you have a working data connection. For more information about ensuring successful data connections, see Internet and MMS settings on page 37.
To read your email messages
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. If you are using several email accounts, tap ⚙️ and select the account that you want to check. If you want to check all your email accounts at once, tap ⚙️, then tap Combined inbox.
4. In the email inbox, scroll up or down and tap the email message that you want to read.

To create and send an email message
1. From your Home screen, tap 📧, then find and tap Email.
2. If you are using several email accounts, tap ⚙️ and select the account from which you want to send the email.
3. Tap ✉️, then type the recipient’s name or email address and select one or more recipients from the drop-down list.
4. Enter the email subject and message text, then tap ✉️.

To reply to an email message
1. In your email inbox, find and tap the message that you want to reply to, then tap Reply or Reply all.
2. Enter your reply, then tap ✉️.

To forward an email message
1. In your email inbox, find and tap the message that you want to forward, then tap Forward.
2. Enter the recipient’s name or email address, then select one or more recipients from the drop-down list.
3. Enter your message text, then tap ✉️.

To view an email message attachment
1. Find and tap the email message containing the attachment that you want to view. Email messages with attachments are indicated by 📀.
2. After the email message opens, tap Load. The attachment starts to download.
3. After the attachment finishes downloading, tap View.

To save a sender’s email address to your contacts
1. Find and tap a message in your email inbox.
2. Tap the name of the sender, tap Add to a contact then tap OK.
3. Select an existing contact, or tap Create new contact.
4. Edit the contact information if desired, then tap Save.

Organising your email messages

To sort your emails
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. If you are using several email accounts, tap ⚙️ and select the account with the inbox that you want to sort. If you want to sort email in all your email accounts at once, tap ⚙️, then tap Combined inbox.
4. Tap ⚙️, then tap Sort.
5. Select a sorting option.
To search for emails
1. From your Home screen, tap , then find and tap Email.
2. If you are using several email accounts, tap and select the account that you want to search. If you want to search all your email accounts at once, tap , then tap Combined inbox.
3. Tap .
4. Enter your search text, then tap on the keyboard.
5. The search result appears in a list sorted by date. Tap the email message that you want to open.

To view all folders for one email account
1. From your Home screen, tap , then find and tap Email.
2. Tap , then select the account that you want to check.
3. Under the account that you want to check, select Show all folders.

To delete email messages
1. Tap and hold the message that you want to delete until the device vibrates.
2. Mark the checkboxes for the messages that you want to delete.
3. Tap .

! You can also flick the message to the right to delete it.

To move an email message to another folder
1. In your email inbox, flick the message that you want to move to the left.
2. Tap Move, then select a folder.

Email account settings

To remove an email account from your device
1. From your Home screen, tap .
2. Find and tap Email.
3. Press , then tap Settings.
4. Select the account you want to remove.
5. Tap Delete account > OK.

To change the inbox check frequency
1. From your Home screen, tap .
2. Find and tap Email.
3. Tap , then tap Settings.
4. Select the desired account.
5. Tap Check frequency > Check frequency and select an option.

To set an Out of Office auto-reply in an Exchange ActiveSync account
1. From your Home screen, tap , then find and tap Email.
2. Press , then tap Settings.
3. Select the EAS (Exchange ActiveSync) account for which you want to set an Out of Office auto-reply.
4. Tap Out of office.
5. Tap the slider to enable the function.
6. If needed, mark the Set time range checkbox and set the time range for the auto-reply.
7. Enter your Out of Office message in the body text field.
8. Tap OK to confirm.

Gmail™
If you have a Google™ account, you can use the Gmail™ application to read and write email messages.
To learn more about Gmail™
* When the Gmail application is open, tap ☐️, then find and tap Help & feedback.
Music

Transferring music to your device

There are two ways to transfer music from a computer to your device:

* You can transfer music files between your device and a computer using the provided USB Type-C™ cable. After connecting, select **Transfer files (MTP)** on your device and then simply copy and paste or drag and drop the files using the computer. See **Managing files using a computer** on page 123.

* You can use the Xperia™ Companion software to transfer your media files between the computer and your device. Learn more and download Xperia™ Companion for Windows at [http://support.sonymobile.com/tools/xperia-companion](http://support.sonymobile.com/tools/xperia-companion) or Xperia™ Companion for Mac at [http://support.sonymobile.com/tools/xperia-companion-mac](http://support.sonymobile.com/tools/xperia-companion-mac).

The Music application may not support all music file formats. For more information about supported file formats and the use of multimedia (audio, image and video) files, download the White paper for your device at [www.sonymobile.com/support](http://www.sonymobile.com/support).

Listening to music

Use the Music application to listen to your favourite music and audio books.

| 1 | Minimise the full screen player |
| 2 | Search all songs saved to your device |
| 3 | View the current play queue |
| 4 | Album art (if available) |
| 5 | Progress indicator – drag the indicator or tap along the line to fast-forward or rewind |
| 6 | Elapsed time of current song |
| 7 | Total time length of current song |
| 8 | Repeat all songs in the current play queue |
| 9 | Tap to go to the next song in the play queue, touch and hold to fast-forward within the current song |
| 10 | Play or pause a song |
| 11 | Tap to go to the previous song in the play queue, touch and hold to rewind within the current song |
| 12 | Shuffle songs in the current play queue |
Music home screen

1. Tap in the top left corner to open the Music menu
2. Scroll up or down to view content
3. Play a song using the Music application
4. Play all songs in shuffle mode
5. Return to the music player screen

To play a song using the Music application
1. From your Home screen, tap 📱, then find and tap 🎵.
2. Tap 🎵.
3. Select a music category.
4. Tap a song to play it.

⚠️ You might not be able to play copyright-protected items. Make sure that you have the necessary rights to the material that you intend to share.

To find song-related information online
- While a song is playing in the Music application, tap the Album art and then tap More about this.

💡 Online resources related to the song can include videos on YouTube™, song lyrics, and artist information on Wikipedia.

To edit music information
1. From the Music application, tap the Album art and then tap Edit music info.
2. Edit the information as desired.
3. When you are finished, tap Save.

To adjust the audio volume
- Press the volume key up or down.

To minimise the Music application
- When a song is playing, tap 🔄 to go to the Home screen. The Music application keeps running in the background.

To open the Music application when it is playing in the background
- While a song is playing in the background, drag the status bar downwards and tap the Music application.
- Alternatively, from your Home screen, tap 📱, then find and tap 🎵.

Music menu
The Music menu gives you an overview of all the songs on your device. From here you can manage your albums and playlists.
1. Return to the Music home screen
2. View the current play queue
3. Browse all artists
4. Browse all albums
5. Browse all songs
6. Browse all folders
7. Browse all genres
8. Browse all playlists
9. Play a shared music file on another device
10. Open the settings menu for the Music application
11. Open the support menu for the Music application

### To open the Music menu

1. From your Home screen, tap 📡, then find and tap 📡.
2. Tap 🎧.

### To return to the Music home screen

- When the Music menu is open, tap Home or simply tap on the screen to the right of the menu.

### To delete a song

1. From the Music menu, browse to the song that you want to delete.
2. Touch and hold the song title, then tap "Delete in the list that appears.
3. Tap Delete again to confirm.

### Playlists

On the Music home screen, you can create your own playlists from the music that is saved on your device.

#### To create your own playlists

1. From the Music home screen, touch and hold the name of the album or song that you want to add to a playlist.
2. In the menu that opens, tap Add to playlist > Create new playlist.
3. Enter a name for the playlist and tap OK.

💡 You can also open the Music home screen menu, tap Playlists, then tap + to create a new playlist.

#### To play your own playlists

1. Open the Music menu, then tap Playlists.
2. Under Playlists, select the playlist that you want to open.
3. If you want to play all songs, tap any song or Shuffle all.
To add songs to a playlist
1. From the Music home screen, browse to the song or album that you want to add to a playlist.
2. Touch and hold the song or the album title, then tap **Add to playlist**.
3. Tap the name of the playlist to which you want to add the album or song. The album or song is now added to the playlist.

To remove a song from a playlist
1. In a playlist, touch and hold the title of the song that you want to delete.
2. Tap **Remove from playlist**.

! You might not be able to delete a song that is saved on the memory card or on your device's internal storage.

To delete a playlist
1. Open the Music menu, then tap **Playlists**.
2. Touch and hold the playlist that you want to delete.
3. Tap **Delete**.
4. Tap **Delete** again to confirm.

! You cannot delete smart playlists.

**Sharing music**

**To share a song**
1. From the Music home screen, browse to the song or album that you want to share.
2. Touch and hold the song title, then tap **Share**.
3. Select an application from the list, then follow the on-screen instructions.

! You can also share albums and playlists in the same way.

**Enhancing the sound**

**To improve the sound quality using the Equaliser**
1. Open the Music menu, then tap **Settings > Audio settings > Sound effects > Equaliser**.
2. To adjust the sound manually, drag the frequency band buttons up or down. To adjust the sound automatically, tap and select a style.

**To turn on the Surround sound feature**
1. Open the Music menu, then tap **Settings > Audio settings > Sound effects > Surround sound (VPT)**.
2. Flick left or right to select a setting, then tap **OK** to confirm.
Camera

Taking photos and recording videos

1. Front camera lens
2. Select capturing mode
3. Switch between the front and main camera
4. Zoom in or out
5. Camera key – Activate the camera/Take photos/Record videos
6. View photos and videos
7. Save location
8. Take photos or record videos
9. Go back a step or exit the camera
10. Capturing mode settings
11. Flash settings

To take a photo from the lock screen

1. To activate the screen, briefly press the power key.
2. To activate the camera, touch and hold the camera icon, then drag it to the left.
3. After the camera opens, tap.

You can activate the camera when the screen is locked and inactive. To do this, press the camera key fully. Press again to take a photo.

To take a photo using the camera key

1. Activate the camera.
2. Press the camera key fully down.

To take a selfie using the front camera

1. Activate the camera.
2. Tap.
3. To take the photo, press the camera key.

To use the still camera flash

1. When the camera is open, tap.
2. Select your desired flash setting.
3. Take the photo.

To use the zoom function

- When the camera is open, pinch or spread on the camera screen.
- You can also use the volume key, pressing up or down. To enable this function, tap then tap More > Use Volume key as.
To record a video using the camera key

1. Activate the camera.
2. Swipe the screen to Video mode.
3. To start recording a video, press the camera key.
4. To stop recording, press the camera key again.

To record a video

1. Activate the camera.
2. If the video camera is not selected, swipe the screen to Video.
3. Point the camera towards the subject.
4. To start recording, tap 
5. To pause when recording a video, tap . To resume recording, tap .
6. To stop recording, tap .

To take a photo when recording a video

- To take a photo while recording a video, tap . The photo is taken as soon as you release the camera button.

To view your photos and videos

1. Activate the camera, then tap a thumbnail to open a photo or video.
2. Flick left or right to view your photos and videos.

To delete a photo or video

1. Find the photo or video that you want to delete.
2. Tap the screen to display the toolbar.
3. Tap .
4. Tap Delete to confirm.

General camera settings

Capturing modes

- **Manual**
  Manually adjust camera settings such as resolution, white balance and ISO.

- **Superior auto**
  Optimise your settings to suit any scene.

- **Video camera**
  Manually adjust video settings such as resolution and focus mode.

- **Camera apps**
  Select camera applications manually.

- Swipe the screen to go to the desired capturing mode or to the application list.

Camera apps

- **Sound Photo**
  Take photos with background sound.

- **AR effect**
  Take photos or videos with virtual scenes and characters.

- **Creative effect**
  Apply effects to photos or videos.

- **Sweep Panorama**
  Take wide-angle and panoramic photos.

- **Style portrait**
  Take photos with real-time portrait styles.

- **Timeshift video**
Take high frame rate videos and apply slow motion effects.

Sticker creator
Create unique stickers from your favourite photos or from your camera viewfinder.

4K video
Take videos with 4K ultra high definition.

Sweep Panorama
You can take wide-angle and panoramic photos from the horizontal or vertical direction in an easy press-and-sweep motion.

To take a panoramic photo
1. Activate the camera.
2. Swipe the screen to select 📼, then select 📼.
3. To select a shooting direction, tap 📼.
4. Press the camera key and move the camera slowly and steadily in the direction of movement indicated on the screen.

Style Portrait
You can use the Style Portrait feature to apply touch-up effects to portrait photos as you take them, to ensure the best results. You can also use the Magic beam setting to add a spotlight pattern for the eyes.

To use the Style portrait feature
1. Activate the camera.
2. Swipe the screen to select 📼, then select 📼.
3. To display all styles, tap the style name that is currently selected, for example, Bubble.
4. To add more styles, tap More.
5. Select the style that you want to apply, then tap 📼 to take a photo.

To use the Magic beam feature
1. Activate the camera.
2. Swipe screen to select 📼, then tap 📼 > 📼.
3. To apply an inside eye spotlight effect, select a customised pattern.

Downloading camera applications
You can download free or paid camera applications from Google Play™ or other sources. Before you start downloading, make sure that you have a working Internet connection, preferably over Wi-Fi® to limit data traffic charges.

To download camera applications
1. Open the camera application.
2. Swipe the screen to select 📼, then tap 📼.
3. Select the application that you want to download, and follow the instructions to complete the installation.

Auto face detection
The camera automatically detects faces and indicates them with frames. A coloured frame shows which face has been selected for focus. Focus is set to the face closest to the centre of the camera. You can also tap one of the frames to select which face should be in focus.

Auto-capturing
Turn on auto-capturing to take pictures automatically using one of the options below.

Hand Shutter
Turn your palm towards the camera to turn on self-timer and take self-portraits in Manual and Superior auto capturing modes.

**Smile Shutter**
Use Smile Shutter™ technology to photograph a face just as it smiles. The camera detects up to five faces and selects one face for smile detection and auto focus. When the selected face smiles, the camera automatically takes a photo.

*Off*
When auto-capturing is off, you can take photos using the shutter button or the camera key.

The **Hand Shutter** function is available for taking self-portraits only.

**To turn on Smile Shutter™**
1. Activate the camera.
2. Tap 🕵️.
3. Find and tap **Auto-capturing > Smile Shutter**.
4. When the camera is open and **Smile Shutter** is turned on, point the camera at your subject. The camera selects which face to focus on.
5. The face appears inside a coloured frame and the photo is taken automatically as soon as a smile is detected.
6. If no smile is detected, you can press the camera key to take the photo manually.

**To turn on Hand Shutter**
1. Activate the camera.
2. Switch to the front camera by tapping 🕵️.
3. Tap 🕵️.
4. Tap **More**.
5. Find and tap **Auto-capturing > Hand Shutter**.

**Saving a photo's geographic location**
Enable the Save location function to geotag your photos - saving the approximate geographical location as you shoot. The geographical location is determined by wireless networks and GPS technology.

When 📍 appears on the camera screen, Saving location is turned on but the geographical position has not been found. When 📍 appears, Saving location is turned on and the geographical location is available, so the geographical location can be added to your photo. When neither of these two symbols appears, Saving location is disabled.

**To turn on geotagging**
1. Activate the camera.
2. Tap 🕵️.
3. Tap **More > Save location**. Tap the slider to enable or disable the function.
4. If you are enabling geotagging, you are prompted to enable Location services if they are not already enabled. Tap OK, then tap the Location slider.

**Touch capture**
With Touch capture, simply tap anywhere on the camera screen to take a photo.

*On*
Front camera only

*Off*

**Touch to adjust**
Touch the screen to choose an area to focus on while taking pictures.
Focus only
Focus and brightness

This function is available in Superior auto mode only.

Auto photo preview
You can choose to preview photos just after you shoot them.

On
After you shoot a photo, a preview of it appears in the lower right corner of the screen for 3 seconds.

Front camera only
After you shoot a photo with the front camera, a preview of it appears in the lower right corner of the screen for 3 seconds.

Off
The photo or video is saved after you shoot it, and no preview appears.

Use Volume key as
You can choose how you want to use the volume key when taking photos.

Zoom
Use the volume key to zoom in or out.

Volume
Use the volume key to adjust the volume of notifications, ringtones and music.

Shutter
Use the volume key to take photos.

Sound
When you take a photo or start recording a video, the Camera makes a shutter sound. If you use the self-timer, it will make a series of beeps to mark the countdown. You can choose to turn these sounds on or off.

Data storage
You can choose to save your data either to a removable SD card or to your device’s internal storage.

Internal storage
Photos or videos are saved on the device memory.

SD card
Photos or videos are saved on the SD card.

Grid lines
Choose to turn on or turn off the grid lines in your camera viewfinder.

Quick launch
Use Quick launch settings to launch the camera when the screen is locked.

Launch only
When this setting is activated, you can launch the camera when the screen is locked by pressing and holding down the camera key.

Launch and capture
When this setting is activated, you can launch the camera and capture a photo automatically when the screen is locked by pressing and holding down the camera key.

Launch and record video
When this setting is activated, you can launch the camera and start capturing video when the screen is locked by pressing and holding down the camera key.
To adjust colour and brightness

1. Activate the camera.
2. Tap ⚽ > find Colour and brightness.
3. Drag the sliders to the desired positions to adjust colour and brightness.

* This setting is only available in the Superior auto and Video camera modes.

White balance, focus and exposure

White balance, which is only available in Manual capturing mode, adjusts the colour balance according to the lighting conditions. You can also adjust the exposure manually in the -2.0 EV to +2.0 EV range. For example, you can increase the image brightness or decrease the overall exposure by tapping the plus or minus controls accordingly when the white balance/focus mode/exposure value adjusting icon ⌘ is displayed.

- **White balance**
  - **Auto**
    - Adjust the colour balance automatically.
  - **Incandescent**
    - Adjust the colour balance for warm lighting conditions, such as under light bulbs.
  - **Fluorescent**
    - Adjust the colour balance for fluorescent lighting.
  - **Daylight**
    - Adjust the colour balance for sunny outdoor conditions.
  - **Cloudy**
    - Adjust the colour balance for a cloudy sky.

- **Focus AF**
  - Adjust focus automatically.

- **Focus MF**
  - Adjust focus manually.

- **SS auto**
  - Adjust shutter speed automatically.

- **SS 1/8**
  - Adjust shutter speed manually.

Still camera settings

To adjust the still camera settings

1. Activate the camera.
2. To display all settings, tap ⚽.
3. Select the setting that you want to adjust, then edit as desired.

Still camera settings overview

Resolution

Choose between several resolutions and aspect ratios before taking a photo. A photo with a higher resolution requires more memory.

- **23MP 5520×4140 (4:3)**
  - 23 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution.

- **20MP 5984×3366 (16:9)**
  - 20 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays.

- **8MP 3264×2448 (4:3)**
8 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution.

8MP
3840×2160(16:9)
8 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays.

3MP
2048×1536(4:3)
3 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution. This setting is only available in Manual capturing mode.

2MP
1920×1080(16:9)
2 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays. This setting is only available in Manual capturing mode.

Self-timer
With the self-timer, you can take a photo without holding the device. Use this function to take self-portraits or group photos with everyone in the photo. You can also use the self-timer if you want to avoid shaking the camera when taking photos.

10 sec.
Set a 10-second delay in taking the photo from when you tap the shutter button or press the camera key.

3 sec.
Set a 3-second delay in taking the photo from when you tap the shutter button or press the camera key.

Off
The photo is taken as soon as you tap the shutter button or press the camera key.

Object tracking
When you select an object by touching it in the viewfinder, the camera tracks it for you.

HDR
Use the HDR (High Dynamic Range) setting to take a photo against strong back light or in conditions where the contrast is sharp. HDR compensates for the loss of detail and produces a picture that is representative of both dark and bright areas.

This setting is only available in Manual capturing mode.

ISO
The ISO sensitivity can be set to adjust automatically, or can be manually adjusted to sensitivity settings ranging from 50 to 3200.

This setting is only available in Manual capturing mode.

Metering
This function automatically determines a well-balanced exposure by measuring the amount of light striking the subject you want to capture.

Face
Measures the amount of light on your subject’s face, and adjusts the exposure so that the face is neither too dark nor too bright.

Multi
Divides the image into several parts, and measures each part to determine a well-balanced exposure.

Centre
Determines the centre of the image, and sets the exposure based on the brightness of the subject there.

Spot
Adjusts the exposure in a very small part of the subject that you want to capture.
Touch
Adjusts the exposure to the desired part of the subject when you touch the screen.

This setting is only available in Manual capturing mode.

Flash
Use the flash to take photos when lighting conditions are poor or when there is a backlight. The following options are available when you tap the flash icon on the camera screen:

- **Auto**
  The camera automatically determines whether the lighting conditions require the use of a flash.

- **Fill flash**
  Use this setting when the background is brighter than the subject. This setting removes unwanted dark shadows.

- **Red-eye reduction**
  Reduces the red colour of eyes when taking a photo.

- **Off**
  The flash is turned off. Sometimes photo quality can be better without the flash, even if lighting conditions are poor. Taking a good photo without using the flash requires a steady hand. Use the self-timer to avoid blurred photos.

- **Torch**
  The flash shines continuously while taking pictures.

Scene selection
Use the Scene selection feature to quickly set up the camera for common situations using pre-programmed scenes. The camera determines a number of settings for you to fit the selected scene, ensuring the best possible photo.

- **Off**
  The Scene selection feature is off and you can take photos manually.

- **Soft Skin**
  Take portraits using an enhanced beauty effect.

- **Soft snap**
  Use for shooting photos against a soft background.

- **Anti motion blur**
  Use for minimising camera shake when shooting a slightly dark scene.

- **Landscape**
  Use for landscape photos. The camera focuses on distant objects.

- **Backlight correction HDR**
  Use to improve details in high contrast shots. The built-in backlight correction analyses the image and automatically adjusts it to give you a perfectly lit shot.

- **Night portrait**
  Use for portrait photos taken at night or in poorly lit environments. Due to the long exposure time, the camera must be held still or placed on a stable surface.

- **Night scene**
  Use when taking photos at night or in poorly lit environments. Due to the long exposure time, the camera must be held still or placed on a stable surface.

- **Hand-held twilight**
  Use for taking hand-held low-light photos with reduced noise and blur.

- **High sensitivity**
  Use for taking photos without a flash in low light conditions. Reduces blur.

- **Gourmet**
  Use for shooting food arrangements in bright colour.

- **Pet**
  Use for taking photos of your pet. Reduces blur and red eyes.
Beach
Use for taking photos of seaside or lakeside scenes.

Snow
Use in bright environments to avoid overexposed photos.

Party
Use for indoor photos in poorly lit environments. This scene picks up indoor background lighting or candlelight. Due to the long exposure time, the camera must be held still or placed on a stable surface.

Sports
Use for photos of fast-moving objects. The short exposure time minimises motion blurring.

Document
Use for photos of text or drawings. Gives the photo sharper contrast.

Fireworks
Use for taking photos of fireworks in all their splendour.

These settings are only available in Manual capturing mode.

Video camera settings

To adjust the video camera settings
1. Activate the camera.
2. Swipe to ⌚.
3. To display settings, tap 📱.
4. Select the setting that you want to adjust, then make your changes.

Video camera settings overview

Scene selection
The Scene selection feature helps you to quickly set up the camera for common situations using pre-programmed video scenes. Each scene setting is designed to produce the best quality video possible in a specific recording environment.

Auto
Scene selection is automatic.

Off
The Scene selection feature is off and you can shoot videos manually.

Soft snap
Use for shooting videos against soft backgrounds.

Landscape
Use for videos of landscapes. The camera focuses on distant objects.

Night scene
When turned on, light sensitivity is increased. Use in poorly lit environments. Videos of fast-moving objects may get blurred. Hold your hand steady, or use a support. Turn off night mode when lighting conditions are good to improve the video quality.

Beach
Use for videos of seaside or lakeside scenes.

Snow
Use in bright environments to avoid overexposed videos.

Sports
Use for videos of fast-moving objects. The short exposure time minimises motion blurring.

Party
Use for indoor videos in poorly lit environments. This scene picks up indoor background lighting or candlelight. Videos of fast-moving objects may get blurred. Hold your hand steady, or use a support.
Video resolution

Adjust the video resolution for different formats.

- **Full HD (30 fps)**
  1920x1080 (16:9)
  Full HD (Full High Definition) format with 30 fps and 16:9 aspect ratio.

- **Full HD (60 fps)**
  1920x1080 (16:9)
  Full HD (Full High Definition) format with 60 fps and 16:9 aspect ratio.

- **HD**
  1280x720 (16:9)
  HD (High Definition) format with 16:9 aspect ratio.

- **VGA**
  640x480 (4:3)
  VGA format with 4:3 aspect ratio.

- **MMS**
  Record videos suitable for sending in multimedia messages. The recording time of this video format is limited so that video files can fit in a multimedia message.

Auto-capturing (video)

Turn on auto-capturing to take pictures automatically while recording a video. Using the Smile shutter™ feature the camera automatically takes snapshots of smiling faces while you continue to record your video.

**To turn on Smile Shutter™ (video)**

1. Activate the camera.
2. Tap .
3. Find and tap Auto-capturing (video) > Smile Shutter.

SteadyShot™

When recording a video, it can be difficult to hold the device steady. The stabiliser helps by compensating for the small movements of your hand.

- **Intelligent active**
  Activate to compensate for major and minor camera shakes.

- **Standard**
  Activate to remove the high-frequency camera shakes.

- **Off**
  The stabiliser is turned off.

Torch

Use the torch to provide lighting for videos when ambient lighting conditions are poor or when there is a backlight. The video flash icon is available on the video camera screen. Note that the video quality can sometimes be better without a light even if lighting conditions are poor.

- **On**
- **Off**

Further Camera support information

Use the Help menu to search for camera-related tests and other useful information. To access support, follow the steps below.

1. Open the camera application.
2. Tap  then tap More > Help
Photos and videos in Album

Viewing photos and videos

Use the Album application to view photos and play videos that you’ve taken with your camera, or to view similar content that you’ve saved to your device. All photos and videos are displayed in a chronologically ordered grid.

1 Tap ⌁ to open the Album home screen menu
2 View menu options
3 A slideshow of all your photos and videos, or of those added to favourites
4 Drag the left edge of the screen to the right to open the Album home screen menu
5 The date of items in the group
6 Tap a photo or video to view it
7 Scroll up or down to view content

To view photos and videos

1 From your Home screen, tap 📷.
2 Find and tap Album.
3 Tap a photo or video that you want to view. If prompted, tap 🎥.
4 Flick left to view the next photo or video. Flick right to view the previous photo or video.

* To set the screen to rotate automatically when turned sideways, tap Rotate the contents of the screen under Settings > Display > When device is rotated.

The Album application may not support all file formats. For more information about supported file formats and the use of multimedia (audio, image and video) files, download the White paper for your device at www.sonymobile.com/support.

To change the size of the thumbnails

* When viewing thumbnails of photos and videos in Album, spread two fingers apart to zoom in, or pinch two fingers together to zoom out.

To zoom a photo

* When you are viewing a photo, spread two fingers apart to zoom in, or pinch two fingers together to zoom out.

To watch a slideshow of your photos

1 When you are viewing a photo, tap the screen to display the toolbars, then tap † > Slideshow to start playing all the photos in an album.
2 Tap a photo to end the slideshow.
To play a video
1 In Album, find and tap the video that you want to play.
2 Tap ◀.
3 If the playback controls are not displayed, tap the screen to display them. To hide the controls, tap the screen again.

To pause a video
1 When a video is playing, tap the screen to display the controls.
2 Tap ◀.

To fast-forward and rewind a video
1 When a video is playing, tap the screen to display the controls.
2 Drag the progress bar marker left to rewind, or right to fast-forward.

To adjust the sound volume of a video
* Press the volume key up or down.

Sharing and managing photos and videos
You can share photos and videos that you’ve saved on your device. You can also manage them in different ways. For example, you can work with photos in batches, delete photos and link them to contacts. If you have lots of photos saved on your device, it’s a good idea to regularly transfer them to a computer or to an external storage device in order to avoid any unpredictable loss of data. Doing so also frees up more space on your device. See Managing files using a computer on page 123.

You might not be able to copy, send or transfer copyright-protected items. Also, some items may not send if the file size is too large.

To share a photo or video
1 In Album, find and tap the photo or video that you want to share.
2 Tap the screen to display the toolbars, then tap ▼.
3 Tap the application that you want to use to share the photo, then follow the steps to send it.

To use a photo as a contact picture
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ▼ > Use as > Contact picture.
2 Select a contact, then edit the photo as desired.
3 Tap Save.

To use a photo as wallpaper
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ▼ > Use as > Wallpaper.
2 Follow the instructions on the screen.

To rotate a photo
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ▼.
2 Tap Rotate, then select an option. The photo is saved in the new orientation.

To delete a photo or video
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ▼.
2 Tap Delete.
To work with batches of photos or videos in Album
1. When viewing thumbnails of photos and videos in Album, touch and hold an item until it is highlighted.
2. Tap other items that you want to work with to select them. If you want to select all items, tap \( \text{Select all} \), then tap \( \text{Select all} \).
3. Use the tools in the toolbar to work with your selected items.

Editing photos with the Photo editor application
You can edit and apply effects to original photos that you’ve taken with your camera. For example, you can change the light effects. After you save the edited photo, the original unchanged version of the photo remains on your device.

To edit a photo
• When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).

To crop a photo
1. When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).
2. If prompted, select \textit{Photo editor}.
3. Tap \( \text{Crop} \).
4. Tap \text{Crop} to select an option.
5. To adjust the crop frame, touch and hold the edge of the crop frame. When the circles at the edges disappear, drag inward or outward to resize the frame.
6. To resize all sides of the crop frame at the same time, touch and hold one of the four corners. When the circles at the edges disappear, drag the corner accordingly.
7. To move the crop frame to another area of the photo, touch and hold inside the frame, then drag it to the desired position.
8. Tap \( \checkmark \).
9. To save a copy of the cropped photo, tap \textit{Save}.

To apply special effects to a photo
1. When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).
2. If prompted, select \textit{Photo editor}.
3. Tap \( \text{\textcolor{red}{\#}} \), \( \text{\textcolor{green}{\#}} \) or \( \text{\textcolor{blue}{\#}} \), then select an option.
4. Edit the photo as desired, then tap \textit{Save}.

To add a photo frame effect to a photo
1. When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).
2. If prompted, select \textit{Photo editor}.
3. Tap \( \text{\textcolor{red}{\#}} \), then select an option.
4. To save a copy of the edited photo, tap \textit{Save}.

To adjust the light settings for a photo
1. When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).
2. If prompted, select \textit{Photo editor}.
3. Tap \( \text{\textcolor{red}{\#}} \), then select an option and edit as desired.
4. To save a copy of the edited photo, tap \textit{Save}.
To set the saturation level of colours in a photo
1. When you are viewing a photo, tap the screen to display the toolbars, then tap 📴.
2. If prompted, select Photo editor.
3. Tap 📴, then select an option.
4. To save a copy of the edited photo, tap Save.

Editing videos with the Video editor application
You can edit videos that you’ve taken with your camera. For example, you can trim a video to the desired length or adjust the speed of a video. After you save the edited video, the original unchanged version of the video remains on your device.

To trim a video
1. In the Album, find and tap the video that you want to edit.
2. Tap the screen to display the toolbars, then tap 📴.
3. If prompted, select Video Editor then tap Trim.
4. To move the trim frame to another part of the timeline, touch and hold the edge of the trim frame and drag it to the desired position, then tap Apply.
5. To save a copy of the trimmed video, tap Save.

To adjust the speed of a video
1. In the Album, find and tap the video that you want to play.
2. Tap the screen to display the toolbars, then tap 📴.
3. If prompted, select Video Editor then tap Speed.
4. Select an option, then touch and hold the edge of the timeline and drag it to the desired position and tap Apply.
5. To save a copy of the edited video, tap Save.

To capture a photo from a video
1. In the Album, find and tap the video that you want to play.
2. Tap the screen to display the toolbars, then tap 📴.
3. If prompted, select Video Editor then tap Photo Capture.
4. With the help of the arrows, or by dragging the marker on the progress bar, select the preferred frame that you want to capture, then tap Save.

Hiding photos and videos
You can hide any photos and videos from the Album home screen. Once photos and videos are hidden from the Album home screen, they can only be viewed from the Hidden folder.

To hide a photo or video
1. In Album, find and tap the photo or video that you want to hide.
2. Tap the screen to display the toolbars, then tap 📴.
3. Tap Hide > OK.

To view your hidden photos and videos
1. In Album, tap 📴, then tap Hidden.
2. Tap a photo or video to view it.
3. Flick left to view the next photo or video. Flick right to view the previous photo or video.

To unhide a photo or video
1. In Album, tap 📴, then tap Hidden.
2. Tap a photo or video that you want to unhide.
3. Tap the screen to display the toolbars, then tap 📴.
4. Tap Don't hide.
**Album home screen menu**

From the Album home screen menu you can browse to all your photo albums, including photos and videos taken with your device’s camera using special effects, as well as content that you have shared online via services such as Picasa™ and Facebook. Once you are logged in to such services, you can manage content and view online images. From the Album application, you can also add geotags to photos, perform basic editing tasks, and use methods such as Bluetooth® wireless technology and email to share content.

1. Return to the Album application home screen to view all content
2. View your favourite photos and videos
3. View all videos saved to your device
4. View your photos on a map or in Globe view
5. View all photos and videos taken with your device’s camera using special effects
6. View all photos and videos saved on your device in different folders
7. View photos and videos on devices in the same network
8. Open the settings menu for the Album application
9. Open web support
10. Scroll up or down to view content

**To view photos from online services in Album**

1. From your Home screen, tap 📌.
2. Find and tap Album, then tap 📌.
3. Tap the desired online service, then follow the on-screen instructions to get started. All available online albums that you have uploaded to the service are displayed.
4. Tap any album to view its content, then tap a photo in the album.
5. Flick left to view the next photo or video. Flick right to view the previous photo or video.

**Viewing your photos on a map**

Adding location information to photos is referred to as geotagging. You can view and tag your photos on a map and show friends and family where you were when you took a particular photo. See Saving a photo’s geographic location on page 87 for more information.

💡 If you have turned on location detection and activated geotagging in the camera, you can tag your photos directly for map viewing at a later stage.
1 View geotagged photos in Globe view
2 Search a location on the map
3 View menu options
4 Double tap to zoom in. Pinch to zoom out. Drag to view different parts of the map
5 A group of photos and/or videos geotagged with the same location
6 Thumbnails of the selected group of photos and/or videos. Tap an item to view it in full screen

If several photos were taken at the same location, only one of them appears on the map. The total number of photos appears in the top right corner, for example, . To view all photos in the group, tap the cover photo and then tap one of the thumbnails at the bottom of the screen.

To add or edit the geotag of a photo
1 When you are viewing a photo, tap the screen to display the toolbars.
2 Tap , then tap Add geotag or Edit geotag to open the map screen.
3 Tap on the map to set the location for the photo.
4 To reset the location for the photo, tap the new location on the map.
5 When you are finished, tap OK.

To view geotagged photos on a map
1 From your Home screen, tap .
2 Find and tap Album.
3 Tap , then tap Places.
4 Tap the photo that you want to view on a map.

To view geotagged photos on a globe
1 From your Home screen, tap .
2 Find and tap Album.
3 Tap , then tap Places > .
4 Tap the photo that you want to view on a globe.

To change the geotag of a photo
1 When viewing a photo on the map in Album, touch and hold the photo until its frame turns blue, then tap the desired location on the map.
2 Tap OK.

To change the map view
• When viewing the map in Album, tap ¼, then switch between Classic view and Satellite view.
Videos

The Video application

Use the Video application to play movies and other video content that you’ve saved or downloaded to your device. The application also serves as a TV programme guide with the option to show detailed programme information and related content, including social media posts about the programme you are interested in. You can use the application as a fully functioning remote controller with your compatible home device. You can also play your movies on other devices that are connected to the same network or saved in the cloud.

Some video files may not be playable in the Video application. Availability of the TV programme guide and the remote controller vary by market and connected device.

1. Open the home screen menu
2. View the programme guide
3. Refresh content
4. Remote controller
5. Search content
6. Switch between viewing contents of your library, Popular programmes, On Air programmes, TV Series, Films, and Recommended programmes
7. Drag the left edge of the screen to the right to open the menu, browse content and adjust settings
8. Tap a programme to get detailed information and related content

To use your device as a remote controller

To use your device as a remote controller with another compatible home network device, you first need to pair the two devices. In order to do this, both devices need to be connected to the same network. For more information on compatible devices, visit Compatible device list.

1. From your Home screen, tap 📲, then find and tap Video.
2. Tap 📩 to open the home screen menu, then tap Add device.
3. Select the home device from the list.
4. Enter the registration number shown on the home device and follow the instructions to finish pairing.
5. After the successful pairing, the 📹 icon for the remote controller function appears. You can now use your device as a fully functional remote controller for the home device.
To change settings
1. From your Home screen, tap 📖, then find and tap Video.
2. Tap ☐ to open the home screen menu, then tap Settings.
3. Change the settings as desired.

To play a video
1. From your Home screen, tap 📖, then find and tap Video.
2. Find and tap the video that you want to play. If the video is not displayed on the screen, tap ☐ to open the home screen menu, then find and tap the video that you want to play.
3. To display or hide the controls, tap the screen.
4. To pause playing, tap ⏸️. To resume playing, tap ⏸️ again.
5. To rewind, drag the progress bar marker to the left. To fast-forward, drag the progress bar marker to the right.

To change the sound settings while a video is playing
1. While a video is playing, tap the screen to display the controls.
2. Tap ⏯️ > Audio settings, then change the settings as desired.
3. When you’re finished, tap OK.

To share a video
1. When a video is playing, tap ⏯️, then tap Share.
2. Tap the application that you want to use to share the selected video, then follow the instructions provided.

Transferring video content to your device
Before you start using the Video application, it’s a good idea to transfer movies, TV shows and other video content to your device from other devices, such as a computer. There are several ways to transfer your content:

* For Windows® only: Connect your device to a computer using a USB Type-C™ cable and drag and drop the video files directly using the file manager application on the computer. See Managing files using a computer on page 123.
* If you have a PC or an Apple® Mac® computer, use Xperia™ Companion to organise content and transfer video files to your device.

Managing video content

To view movie information
1. From your Home screen, tap 📖, then find and tap Video.
2. Tap ☐ to open the home screen menu, then tap Mobile device.
3. Browse through the different categories and find the desired video.
4. Tap the video thumbnail.

To delete a video
1. From your Home screen, tap 📖, then find and tap Video.
2. Tap ☐ to open the home screen menu, then tap Mobile device.
3. Browse through the different categories and find the desired video.
4. Tap the video thumbnail, then tap ☐ again.
5. Tap Delete again to confirm.

Movie Creator
The Xperia™ Movie Creator automatically creates short videos using existing photos and videos. The application automatically determines the timeline to create its movie. For example, it can take a selection of photos and videos from a Saturday afternoon outing or from a weekly, monthly, even a yearly period and create a movie for you. When this highlight-style movie is ready, you get notified. You can then edit it as
desired. For example, you can edit the title, delete scenes, change the music or add more photos and videos. You can create Highlight Movies by selecting photos and videos manually.

**To open Movie Creator**

1. From your Home screen, tap 📱.
2. Find and tap Movie Creator.

**To enable or disable Movie Creator notifications**

1. From your Home screen, tap 📱.
2. Find and tap Movie Creator.
3. Tap 🌉, then tap Settings, and tap the Notifications slider to enable or disable notifications.

**To enable or disable the automatic creation of Highlight Movies**

1. From your Home screen, tap 📱.
2. Find and tap Movie Creator.
3. Tap 🌉, then tap Settings, and tap the Auto-creating slider to enable or disable the function.

**To manually create a Highlight Movie**

1. From your Home screen, tap 📱.
2. Find and tap Movie Creator.
3. Tap 🌉 > Create new.
4. Select the desired photos or videos by tapping them.
5. Tap Create. If you want to edit a Highlight Movie, tap View story, then use the toolbar to edit as desired.

**To create a Highlight Movie from Facebook events**

1. From your Home screen, tap 📱.
2. Find and tap Movie Creator.
3. Tap 🌉 > Settings.
4. Tap the slider beside Link Facebook.
   - Movie Creator is now linked with your Facebook account if you are already logged in to Facebook.
   - If you are not yet logged in to Facebook, follow the on-screen instructions.
5. Tap ⏩, then scroll down to browse your Facebook events.
6. Choose an event to create a Highlight Movie about and tap Create.
Connectivity

Mirroring the screen of your device wirelessly on a TV

You can use the Screen mirroring feature to show the screen of your device on a TV or other large display without using a cable connection. Wi-Fi Direct® technology creates a wireless connection between the two devices, so you can sit back and enjoy your favourite photos from the comfort of your couch. You can also use this feature to listen to music from your device using the TV’s speakers.

⚠️ When using Screen mirroring, the image quality may sometimes be negatively impacted if there is interference from other Wi-Fi networks.

To mirror the screen of your device on a TV screen

1. TV: Follow the instructions in the User guide of your TV to turn on the screen mirroring function.
2. Your device: From your Home screen, tap 📲.
3. Find and tap Settings > Device connection > Screen mirroring.
4. Tap Start.
5. Tap OK and select a device.

⚠️ Your TV must support screen mirroring based on Wi-Fi CERTIFIED Miracast™ for the function to work. If your TV does not support Screen mirroring, you may need to purchase a wireless display adapter separately. Also, when using screen mirroring, do not cover the Wi-Fi antenna area of your device.

To stop screen mirroring between devices

1. From your Home screen, tap 📲.
2. Find and tap Settings > Device connection > Screen mirroring.
3. Tap Disconnect, then tap OK.

Sharing content with DLNA Certified™ devices

You can view or play media content saved to your device on other devices such as a TV or a computer. These devices must be on the same wireless network and can be Sony TVs or speakers, or products that are DLNA Certified™ by the Digital Living Network Alliance. You can also view or play content from other DLNA Certified™ devices on your device.

After you set up media sharing between devices, you can for example listen to music files stored on your home computer using your device, or view photos taken with your device’s camera on a large-screen TV.

Playing files from DLNA Certified™ devices on your device

When you play files from another DLNA Certified™ device on your device, this other device acts as a server. In other words, it shares content over a network. The server device must have its content sharing function enabled and give access permission to your device. It also must be connected to the same Wi-Fi® network as your device.

To use your device to play a music track stored on another device

1. Make sure that the device you want to share files with is connected to the same Wi-Fi® network as your device.
2. From your Home screen, tap 📲, then find and tap 📲.
3. Tap 📲, then tap Home network.
4. Select a device from the list of connected devices.
5. Browse the folders of the connected device and select the track that you want to play. Once selected, the track starts playing automatically.
To play a shared video on your device

1. Make sure the devices that you want to share files with are connected to the same Wi-Fi network as your device.
2. From your Home screen, tap , then find and tap .
3. Tap , then tap Home network.
4. Select a device from the list of connected devices.
5. Browse the folders of the connected device and select the video that you want to play.

To view a shared photo on your device

1. Make sure the devices that you want to share files with are connected to the same Wi-Fi network as your device.
2. From your Home screen, tap , then find and tap .
3. Tap , and then tap .
4. Select a device from the list of connected devices.
5. Browse the folders of the connected device and select a photo to view it.

Playing files from your device on DLNA Certified™ devices

Before you can view or play media files from your device on other DLNA Certified™ devices, you must set up file sharing on your device. The devices that you share content with are called client devices. For example, a TV, computer or tablet can act as client devices. Your device works as a media server when it makes content available to client devices. When you set up file sharing on your device, you must also give access permission to client devices. After you do so, such devices appear as registered devices. Devices that are waiting for access permission are listed as pending devices.

To set up file sharing with other DLNA Certified™ devices

1. Connect your device to a Wi-Fi® network.
2. From your Home screen, tap , then find and tap Settings > Device connection > Media server.
3. Tap the slider beside Share media.

To stop sharing files with other home network devices

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Tap the Share media slider.

To set access permissions for a pending device

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Pending devices list.
4. Select an access permission level.
To change the name of a registered device
1. From your Home screen, tap 
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Registered devices list, then select Change name.
4. Enter a new name for the device, then tap OK.

To change the access level of a registered device
1. From your Home screen, tap 
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Registered devices list.
4. Tap Change access level and select an option.

To get help with sharing content with other DLNA Certified™ devices
1. From your Home screen, tap 
2. Find and tap Settings > Device connection > Media server.
3. Tap and then tap Help.

Displaying files on another device using Cast

Using DLNA™ technology, you can push media content from your device to another device connected to the same Wi-Fi® network. The receiving device must be able to function as a Digital Media Renderer (DMR) device and play content received from your device. A TV that supports DLNA™ or a PC running Windows® 7 or later are examples of DMR devices.

! The steps for playing shared media may vary depending on the client device. Refer to the user guide of the DMR device for more information.

! Content secured with Digital Rights Management (DRM) cannot be played on a Digital Media Renderer device using DLNA™ technology.

To find devices to share content with using Cast
1. Make sure that the device you want to share content with is connected to the same Wi-Fi® network as your device.
2. From your Home screen, tap 
3. Find and tap 
4. Tap Device connection > Cast to display the list of available devices.

To display photos or videos on a client device using Cast
1. Make sure that you have correctly set up the DMR or DLNA™ client device and that it is connected to the same Wi-Fi network as your device.
2. From your Home screen, tap 
3. Find and tap Album.
4. Browse and open the photos or videos that you want to view.
5. Tap the screen to display the toolbar, then tap and select the device that you want to share your content with.
6. To stop sharing the photo or video with the client device, tap and then select Stop casting.

You may also see Google Cast devices shown on the list when tapping .

This is an Internet version of this publication. © Print only for private use.
To play a music track on a client device using Cast
1 Make sure that you have correctly set up the DMR or DLNA™ client device and that it is connected to the same Wi-Fi® network as your device.
2 From your Home screen, tap 📱, then find and tap 📱.
3 Select a music category and browse to the track that you want to share, then tap the track.
4 Tap 📱 and select a client device to share your content with. The track starts playing on the device that you select.
5 To disconnect from the client device, tap 📱 and then select Stop casting.

★ You may also see Bluetooth and Google Cast devices shown on the list when tapping 📱.

Connecting your device to USB accessories
You can use a USB Type-C™ Host adapter to connect your device to USB accessories such as USB mass storage devices, game controllers, USB keyboards and USB mice. If the USB accessory has a USB Type-C connector, a USB Type-C Host adapter is not necessary.

USB Type-C Host adapters are sold separately. Sony does not guarantee that all USB accessories are supported by your device.

⚠ This device has a capless USB Type-C port. If your device gets exposed to water, ensure that the port is completely dry before connecting a USB Type-C cable.

To access content on a USB mass storage device using a USB Type-C™ Host adapter
1 Attach the USB Type-C Host adapter to your device, then connect the adapter to the USB mass storage device.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Device connection > USB Connectivity > Detect USB device.
4 To access files and folders on the USB storage device, use a file manager app such as File Commander.

★ You can also open the relevant media application on your device to view content directly. For example, you can open the Album application to view photos stored on USB mass storage devices.

To disconnect a USB mass storage device
1 To open the Notification Panel, drag the status bar downwards, then tap USB storage connected.
2 Tap OK.
3 Detach the USB Type-C™ Host adapter from your device.

To connect a USB accessory using a USB Type-C™ host adapter
1 Attach the USB Type-C Host adapter to your device, then connect the adapter to the USB accessory.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Device connection > USB Connectivity > Detect USB device.

⚠ Additional steps or software may be required to set up game controllers, USB audio and USB Ethernet accessories. Sony does not guarantee that all USB accessories are supported by your device.
To connect a USB Type-C™ accessory using a USB Type-C connector

1. Attach the USB Type-C connector of the USB Type-C accessory to your device.
2. From your Home screen, tap 📲.
3. Find and tap Settings > Device connection > USB Connectivity > Detect USB device.

⚠️ Sony does not guarantee that all USB Type-C accessories with a USB Type-C connector are supported by your device.

Connecting your device to a DUALSHOCK™ 4 wireless controller

Using a DUALSHOCK™ 4 wireless controller you can play games stored on your Xperia device, or game console using Remote Play.

To connect a DUALSHOCK™ 4 wireless controller to your device

1. From your Home screen, tap 📲.
2. Find and tap Settings > Device connection > DUALSHOCK™ 4.
3. Tap Pair controller, then follow the on-screen instructions to complete the connection.

NFC

Use Near Field Communication (NFC) to share data with other devices, such as videos, photos, web page addresses, music files or contacts. You can also use NFC to scan tags that give you more information about a product or service as well as tags that activate certain functions on your device.

NFC is a wireless technology with a maximum range of one centimetre, so the devices sharing data must be held close to each other. Before you can use NFC, you must first turn on the NFC function, and the screen of your device must be active.

The NFC detection area is located on the front of the device. Hold your device close to another device or an NFC reader so that the NFC detection areas touch each other.

⚠️ NFC may not be available in all countries or regions. Using certain apps, some NFC functions can be enabled even when the device is switched off. Note that not all devices support this feature.

To enable or disable the NFC function

1. From your Home screen, tap 📲.
2. Find and tap Settings > More.
3. Tap the NFC slider.
To share a contact with another device using NFC

1. Make sure that both devices have the NFC function turned on, and that both screens are active and unlocked.
2. To view contacts, go to your Home screen, tap 📞, then tap 📞.
3. Tap the contact that you want to share.
4. Hold your device and the receiving device close to each other so that the NFC detection areas of each device touch. When the devices connect, a thumbnail of the contact appears.
5. Tap the thumbnail to start the transfer.
6. When the transfer is done, the contact information is saved on the receiving device and displayed on its screen.

To share a music file with another device using NFC

1. Make sure that both your device and the receiving device have the NFC function turned on, and that both screens are active.
2. To open the Music application, tap 🎵, then find and tap 🎵.
3. Select a music category and browse to the track you want to share.
4. Tap the track to play it. You can then tap 🎵 to pause the track. The transfer works whether the track is playing or paused.
5. Hold your device and the receiving device close to each other so that the NFC detection areas of each device touch. When the devices connect, a thumbnail of the track appears.
6. Tap the thumbnail to start the transfer.
7. When the transfer is done, the music file is saved on the receiving device and displayed on its screen.

To share a photo or video with another device using NFC

1. Make sure that both devices have the NFC function turned on, and that both screens are active and unlocked.
2. To view photos and videos on your device, go to your Home screen, tap 📷, then find and tap 📷.
3. Tap the photo or video that you want to share.
4. Hold your device and the receiving device close to each other so that the NFC detection areas of each device touch. When the devices connect, a thumbnail of the photo or video appears.
5. Tap the thumbnail to start the transfer.
6. When the transfer is done, the photo or video is saved on the receiving device.

To share a web address with another device using NFC

1. Make sure that both devices have the NFC function turned on, and that both screens are active and unlocked.
2. From your Home screen, tap 🗺️.
3. To open the web browser, find and tap 🌐.
4. Load the web page that you want to share.
5. Hold your device and the receiving device close to each other so that the NFC detection areas of each device touch. When the devices connect, a thumbnail of the web page appears.
6. Tap the thumbnail to start the transfer.
7. When the transfer is done, the web page is displayed on the screen of the receiving device.

Scanning NFC tags

Your device can scan various kinds of NFC tags to receive additional information, such as a web address. For example, it can scan embedded tags on a poster, on a billboard advertisement, or beside a product in a retail store.
To scan an NFC tag
1. Make sure that your device has the NFC function turned on and that the screen is active.
2. Place your device over the tag so that the NFC detection area touches it. Your device scans the tag and displays the content collected. Tap the content of the tag to open it.

Connecting to an NFC compatible device
You can connect your device to other NFC compatible devices produced by Sony, such as speakers or headphones. When establishing this kind of connection, refer to the User guide of the compatible device for more information.

Bluetooth® wireless technology
Use the Bluetooth® function to send files to other Bluetooth® compatible devices, or to connect to handsfree accessories. Bluetooth® connections work better within 10 metres (33 feet), with no solid objects in between. In some cases you have to manually pair your device with other Bluetooth® devices.

- Interoperability and compatibility among Bluetooth® devices can vary.
- If you are using a device with multiple users, each user can change the Bluetooth® settings, and the changes affect all users.

To turn the Bluetooth® function on or off
1. From your Home screen, tap .
2. Find and tap Settings > Bluetooth.
3. Tap the Bluetooth slider to enable or disable the function.

Naming your device
You can give your device a name. This name is shown to other devices after you have turned on the Bluetooth® function and your device is set to visible.

To give your device a name
1. Make sure that the Bluetooth® function is turned on.
2. From your Home screen, tap .
3. Find and tap Settings > Bluetooth.
4. Tap > Rename this device.
5. Enter a name for your device.
6. Tap Rename.

Pairing with another Bluetooth® device
When you pair your device with another device, you can for example connect your device to a Bluetooth® headset or a Bluetooth® car kit, and use these other devices to share music.

Once you pair your device with another Bluetooth® device, your device remembers this pairing. When pairing your device with a Bluetooth® device for the first time, you may need to enter a passcode. Your device will automatically try the generic passcode 0000. If this does not work, refer to the user guide for your Bluetooth®
device to get the device passcode. You do not need to re-enter the passcode the next time you connect to a previously paired Bluetooth® device.

Some Bluetooth® devices, for example, most Bluetooth® headsets, require you to both pair and connect with the other device.

You can pair your device with several Bluetooth® devices, but you can only connect to one Bluetooth® profile at the same time.

**To pair your device with another Bluetooth® device**

1. Make sure that the device you want to pair with has the Bluetooth® function activated and is visible to other Bluetooth® devices.
2. From your device’s Home screen, tap 📲.
3. Find and tap Settings > Bluetooth.
4. Tap the Bluetooth slider to enable the function. A list of the available Bluetooth® devices appears.
5. Tap the Bluetooth® device that you want to pair with.
6. Enter a passcode, if required, or confirm the same passcode on both devices.

**To connect your device to another Bluetooth® device**

1. From your Home screen, tap 📲.
2. Find and tap Settings > Bluetooth.
3. Tap the Bluetooth® device that you want to connect to.

**To unpair a Bluetooth® device**

1. From your Home screen, tap 📲.
2. Find and tap Settings > Bluetooth.
3. Under Paired devices, tap 📲 beside the name of the device that you want to unpair.
4. Tap Forget.

**Sending and receiving items using Bluetooth® technology**

Use Bluetooth® technology to share items with other Bluetooth® compatible devices such as phones or computers. You can send and receive the following kinds of items:

* Photos and videos
* Music and other audio files
* Web pages

**To send items using Bluetooth®**

1. Receiving device: Make sure the Bluetooth® function is turned on and that the device is visible to other Bluetooth® devices.
2. Sending device: Open the application which contains the item that you want to send, and scroll to the item.
3. Depending on the application and on the item that you want to send, you may need to, for example, touch and hold the item, open the item, and press 📲.
4. Select Bluetooth.
5. Turn on Bluetooth® if you are prompted to do so.
6. Tap the name of the receiving device.
7. Receiving device: If prompted, accept the connection.
8. Sending device: If prompted, confirm the transfer to the receiving device.
9. Receiving device: Accept the incoming item.
To receive items using Bluetooth®

1. Make sure that the Bluetooth® function is on and is visible to other Bluetooth® devices.
2. The sending device now starts sending data to your device.
3. If prompted, enter the same passcode on both devices, or confirm the suggested passcode.
4. When you are notified of an incoming file to your device, drag the status bar downwards and tap the notification to accept the file transfer.
5. Tap Accept to start the file transfer.
6. To view the progress of the transfer, drag the status bar downwards.
7. To open a received item, drag the status bar downwards and tap the relevant notification.

To view files you have received using Bluetooth®

1. From your Home screen, tap 📲.
2. Find and tap Settings > Bluetooth.
3. Press ⌃ and select Show received files.
Smart apps and features that save you time

Google Search and Now

Use the Google app to search the internet. You can also enable Now cards for regular updates – for example, you can get traffic information before commuting to work, find popular restaurants in your area, see your favorite team’s current score, and more. The app can be accessed by tapping in the application list, or you can reserve a pane on your Home screen for quick access and easy reading.

To enable or disable Now cards
1 From your Home screen, tap .
2 Find and tap Settings > Google > Search & Now > Now cards.
3 Tap the Show cards slider.

To reserve a pane on the Home screen for Google Search and Now
1 Touch and hold any area on your Home screen until the device vibrates.
2 Tap , then tap the Google Now™ slider.
3 You can now swipe to the left-most pane on the Home screen to access the Google Search and Now interface.

If you reserve the left-most pane for Google Search and Now, the main Home screen pane cannot be changed and additional panes cannot be added to the left. Only the left-most pane can be reserved.

News Suite

Using the News Suite application

News Suite is a two-in-one news app featuring a new two-tab concept: switch between the News tab, where you can find out about all the latest current affairs and the My Feeds tab, where you can read up on all the news that’s most relevant to your own interests.

The News Suite application is not available in all markets.

To open the News Suite application
1 From your Home screen, tap .
2 Find and tap .

Using your device as a wallet

Use your device as a wallet to pay for goods without reaching for your real wallet. All of your installed payment services are put together to be viewed and managed. Note that when making a payment, you must first turn on the NFC function before your device touches a card reader. For more information about NFC, see NFC on page 107.

Mobile payment services may not yet be available in all regions.

To manage payment services
1 From your Home screen, tap .
2 Find and tap Settings > More > Tap & pay. A list of payment services appears.
3 Manage the payment services as desired, for example, you can change your default payment service.
Travel and maps

Using location services

Location services allow applications such as Maps and the camera to use information from mobile and Wi-Fi® networks as well as Global Positioning System (GPS) information to determine your approximate location. If you’re not within a clear line of sight to GPS satellites, your device can determine your location using the Wi-Fi® function. And if you’re not within range of a Wi-Fi® network, your device can determine your location using your mobile network.

In order to use your device to find out where you are, you need to enable location services.

⚠️ You may incur data connection charges when you connect to the Internet from your device.

To enable or disable location services

1. From your Home screen, tap 📲.
2. Find and tap Settings > Location, then tap the slider to enable or disable location services.

Improving GPS accuracy

The first time you use the GPS function in your device, it can take a few minutes for your location to be found. To help the search, make sure you have a clear view of the sky. Stand still and don’t cover the GPS antenna (the highlighted area in the image). GPS signals can pass through clouds and plastic, but not through most solid objects such as buildings and mountains. If your location isn’t found after a few minutes, move to another location.

Google Maps™ and navigation

Use Google Maps™ to track your current location, view real-time traffic situations and receive detailed directions to your destination.

The Google Maps™ application requires internet connection when used online. You may incur data connection charges when you connect to the Internet from your device. To get more detailed information about how to use this application, go to http://support.google.com and click the “Maps for mobile” link.

⚠️ The Google Maps™ application may not be available in every market, country or region.

To use Google Maps™

1. From your Home screen, tap 📲.
2. Find and tap Google > Maps.
Using data traffic when travelling

When you travel outside of your home mobile network, you may need to access the Internet using mobile data traffic. If so, you need to activate data roaming on your device. You may incur additional charges when you activate data roaming. It is recommended to check the relevant data transmission charges in advance.

⚠️ If you are using a device with multiple users, you may need to log in as the owner, that is, the primary user, to activate or deactivate data roaming.

To enable or disable data roaming

1. From your Home screen, tap 📱.
2. Find and tap Settings > More > Mobile networks.
3. Tap the Data roaming slider to enable or disable the function.

⚠️ You can’t activate data roaming while mobile data traffic is turned off.

Airplane mode

In Airplane mode, the network and radio transceivers are turned off to prevent disturbance to sensitive equipment. However, you can still play games, listen to music, watch videos and other content, as long as all this content is saved on your memory card or internal storage. You can also be notified by alarms, if alarms are activated.

💡 Turning on Airplane mode reduces battery consumption.

To enable or disable Airplane mode

1. From your Home screen, tap 📱.
2. Find and tap Settings.
3. Tap the Airplane mode slider.
Clock and Calendar

Calendar

Use the Calendar application to manage your time schedule. If you have signed in to and synchronised your device with one or several online accounts that include calendars, for example, your Google™ account or Xperia™ with Facebook account, then calendar events from these accounts will also appear in the Calendar application. You can select which calendars you want to integrate into the combined Calendar view.

When an appointment time approaches, your device plays a notification sound to remind you.

1. Access settings, select a view type and the calendars that you want to view
2. Return to the current date
3. Access other options
4. Flick left or right to browse more quickly
5. Add a calendar event

To learn more about Calendar
* When the Calendar application is open, tap ☰, then find and tap Help & feedback.

Clock

You can set one or several alarms and use any sound file saved on your device as the alarm signal. The alarm does not sound if your device is turned off.

The alarm time format displayed is the same as the format you select for your general time settings, for example, 12-hour or 24-hour.

1. Access the alarms tab
2. Access the world clock tab
3 Access the stopwatch tab
4 Access the timer tab
5 View options for the current tab
6 Open date and time settings
7 Turn an alarm on or off
8 Add a new alarm

To set a new alarm
1 From your Home screen, tap .
2 Find and tap Clock.
3 Tap .
4 Tap Time and select the desired value.
5 Tap OK.
6 If desired, edit other alarm settings.
7 Tap Save.

To snooze an alarm when it sounds
* Tap Snooze.

To turn off an alarm when it sounds
* Drag to the right.
  
To edit an existing alarm
1 Find and tap Clock, then tap the alarm that you want to edit.
2 Make the desired changes.
3 Tap Save.

To turn an alarm on or off
* Find and tap Clock, then tap the slider for the alarm you want to turn on or off.

To delete an alarm
1 Find and tap Clock, then touch and hold the alarm that you want to delete.
2 Tap Delete alarm, then tap Yes.

To set the sound for an alarm
1 Find and tap Clock, then tap the alarm that you want to edit.
2 Tap Alarm sound and select an option, or tap and select a music file.
3 Tap Done, then tap Save.

To adjust the volume level for an alarm
1 Find and tap Clock, then tap the alarm that you want to edit.
2 Drag the volume slider under Alarm volume to the desired position.
3 Tap Save.

To set a recurring alarm
1 Find and tap Clock, then tap the alarm that you want to edit.
2 Tap Repeat.
3 Mark the checkboxes for the relevant days, then tap OK.
4 Tap Save.
To activate the vibrate function for an alarm
1 Find and tap Clock, then tap the alarm that you want to edit.
2 Mark the Vibrate checkbox.
3 Tap Save.

To set the side keys behaviour
1 Find and tap Clock, then select the alarm that you want to edit.
2 Tap Side keys behaviour, then select the desired behaviour of side keys when they are pressed during the alarm.
3 Tap Save.
Accessibility

Magnification gestures
Magnification gestures allow you to zoom in to parts of the screen by tapping an area of the touchscreen three times in succession.

To enable or disable Magnification gestures
1. From your Home screen, tap 📆.
2. Find and tap Settings > Accessibility > Magnification gestures.
3. Tap the slider under Magnification gestures.

To magnify an area and pan across the screen
1. Make sure that Magnification gestures are enabled.
2. To temporarily magnify an area, tap it three times.
3. Move the area by dragging it with two or more fingers.
4. To exit zoom mode, tap the area three times again.

- With certain applications, you can also zoom in or out by pinching an area.

Large text
You can enable the Large text option to increase the default size of text displayed on your device.

To enable or disable Large text
1. From your Home screen, tap 📆.
2. Find and tap Settings > Accessibility.
3. Tap the slider beside Large text.

Colour correction
The Colour correction setting adjusts how colours are displayed on the screen for users who are colour blind or have difficulty distinguishing between colours.

To enable Colour correction
1. From your Home screen, tap 📆.
2. Find and tap Settings > Accessibility > Colour correction.
3. Tap the slider under Colour correction.
4. Tap Correction mode, then select the appropriate colour sensitivity.

- Colour correction is currently an experimental feature and may affect device performance.

TalkBack
TalkBack is a screen reader service for visually impaired users. TalkBack uses spoken feedback to describe any events or actions performed on your Android device. TalkBack describes the user interface and reads out software errors, notifications and messages.
To enable TalkBack
1. From your Home screen, tap 📱.
2. Find and tap Settings > Accessibility > TalkBack.
3. Tap the slider under TalkBack and then tap OK.

⚠️ To change speech, feedback and touch preferences for TalkBack, tap Settings.

TalkBack launches a tutorial immediately after you enable the feature. To exit the tutorial, tap ⬇️, then tap the screen twice.

To disable TalkBack
1. From your Home screen, tap 📱, then tap any place of the screen twice.
2. Find, select, then double-tap Settings > Accessibility > TalkBack by scrolling through the list with two or more fingers.
3. Tap the slider, then tap any place of the screen twice.
4. Tap OK, then tap twice anywhere on the screen.

TTY (Teletypewriter) mode

The TTY (Teletypewriter) feature on your device allows people who are deaf, hard of hearing, or who have speech or language disabilities, to communicate using a TTY device or a relay service.

To enable TTY mode
1. From your Home screen, tap 📱.
2. Find and tap Settings > Call.
3. Tap Accessibility > TTY mode.
4. Select the applicable TTY mode.
Support and maintenance

Support for your device

Use the Support application on your device to search a User guide, read troubleshooting guides, and find information about software updates and other product-related information.

To access the Support application

1. From your Home screen, tap 🍃.
2. Find and tap ?, then select the required support item.

💡 Connect to the Internet when using the Support application for the best available support.

Help in menus and applications

Some applications and settings have help available in the options menu, which is normally indicated by 🏆 in the individual applications.

Xperia™ Tips

Using Xperia™ Tips you can get useful information for your device via notifications, and learn all you need to get started.

To enable or disable Xperia™ Tips

1. From your Home screen, tap 🍃.
2. Find and tap Settings > Introduction & Tips.
3. Tap the Xperia™ Tips slider.

Help us improve our software

You can allow the sending of usage info from your device so that Sony Mobile can receive anonymous bug reports and statistics that help improve our software. None of the information gathered includes personal data.

To allow the sending of usage info

1. From your Home screen, tap 🍃.
2. Find and tap Settings > About phone > Usage info settings.
3. Mark the Send usage info checkbox if it is not already marked.
4. Tap Agree.

Computer tool

Xperia™ Companion is available to help you connect your device to a computer and manage content such as contacts, movies, music and photos.

⚠️ This device has a capless USB Type-C™ port. If your device gets exposed to water, ensure the USB Type-C port is completely dry before inserting a USB Type-C cable.

Xperia™ Companion

Xperia™ Companion is a software service which provides a collection of tools and applications you can use when you connect your device to a computer. With Xperia™ Companion, you can:

* Update or repair your device’s software.
* Transfer your content from an old device using Xperia™ Transfer.
* Back up and restore content on your computer.
* Sync multimedia content – photos, videos, music and playlists – between your device and computer.
* Browse files on your device.
To use Xperia™ Companion, you need an Internet-connected computer running one of the following operating systems:

* Microsoft® Windows® 7 or later
* Mac OS® X 10.8 or later

Updating your device

You should update the software on your device to get the latest functionality, enhancements and bug fixes in order to ensure optimal performance. When a software update is available, ✪ appears in the status bar. You can also check for new updates manually, or schedule an update.

The easiest way to install a software update is to do it wirelessly from your device. However, some updates are not available for wireless download. You then need to use the Xperia™ Companion software on a PC or on an Apple® Mac® computer to update your device.

For more information about software updates, go to www.sonymobile.com/update.

Insufficient remaining storage capacity may prevent updates. Ensure you have sufficient storage capacity before attempting to update.

If you are sharing a device with multiple users, you must log in as the owner, that is, the primary user, to update the device.

To check for new software

1. If you are using a device with multiple users, make sure you are logged in as the owner.
2. From your Home screen, tap 📱.
3. Find and tap Settings > About phone > Software update.

If no new software is available, it’s possible that you may not have enough free memory on your device. If your Xperia™ device has less than 500 MB of free internal memory available, you do not receive any information about new software. In this case you receive a warning in the Notification panel: “Storage space running out. Some system functions may not work.” If you receive this notification, you must free up internal memory to get notifications about new available software.

Updating your device wirelessly

Use the Software update application to update your device software wirelessly. The updates you can download over a mobile network depend on your operator. It is recommended to use a Wi-Fi® network instead of a mobile network to download new software so that you can avoid data traffic costs.

To download and install a system update

1. If you are sharing a device with multiple users, make sure you are logged in as the owner.
2. From your Home screen, tap 📱.
3. Find and tap Settings > About phone > Software update.
4. If a system update is available, tap Download to download it to your device.
5. When the download is finished, tap Continue, and follow the on-screen instructions to complete the installation.
To schedule a software update

1. From your Home screen, tap 📱.
2. Find and tap Settings > About phone > Software update.
3. Tap ⏳, then tap Settings > Automatic installation > Set time.
4. Set the desired time for the software update, then tap OK.

Updating your device using a computer

You can download and install software updates on your device using a computer with an Internet connection. To do this, you need a USB Type-C™ cable and a PC or an Apple® Mac® computer running the Xperia™ Companion software.

- If you don’t have the Xperia™ Companion software installed on the relevant computer, connect your device to the computer using a USB Type-C cable and follow the on-screen installation instructions.

To update your device using a computer

1. Make sure you have the Xperia™ Companion software installed on your PC or Apple® Mac® computer.
2. Using a USB Type-C™ cable, connect your device to the computer.
3. Open Xperia™ Companion, if it is not automatically launched.
4. Computer: If a new software update is detected, a popup window appears. Follow the on-screen instructions to run the relevant software updates.

★ When you connect the device to the computer via a USB Type-C cable, you are prompted to install the Xperia™ Companion software, or cancel, unless you have previously selected Do not show again.

Storage and memory

Your device has several different storage and memory options.

- The internal storage is about 32 GB and is used to store downloaded or transferred content along with personal settings and data. Some examples of data saved to the internal storage are alarm, volume and language settings, emails, bookmarks, calendar events, photos, videos and music.
- You can use a removable memory card with a storage capacity of up to 256 GB to get more storage space. Media files and some apps, along with their associated data, can be moved to this type of memory to free up internal storage. Some apps, for example, the Camera app, can save data directly to a memory card.
- The dynamic memory (RAM) is about 3 GB and cannot be used for storage. RAM is used to handle running applications and the operating system.

★ You may have to purchase a memory card separately.

★ Read more about the use of memory in Android devices by downloading the White paper for your device at www.sonymobile.com/support.

Improving memory performance

Your device memory tends to fill up as a result of normal usage. If the device starts to slow down, or applications suddenly shut down, you should consider the following:

- Always try to keep at least 100 MB of free internal storage available.
- Close running applications that you are not using.
- Clear the cache memory for all applications.
- Uninstall downloaded applications that you don’t use.
- Move applications to the memory card if the internal storage is full.
- Transfer photos, videos and music from the internal memory to the memory card.
• If your device can’t read content on the memory card, you may need to format the card. Note that all content on the card gets erased when you format it.

! If you are sharing a device with multiple users, you must log in as the owner, that is, the primary user, to be able to perform certain actions, such as transferring data to the memory card and formatting the memory card.

To view the memory status
1. From your Home screen, tap 📱.
2. Find and tap Settings > Storage & memory.

To view the amount of free and used RAM
1. From your Home screen, tap 📱.
2. Find and tap Settings > About phone > Diagnostics > Facts.

To clear the cache memory for all applications
1. From your Home screen, tap 📱.
2. Find and tap Settings > Storage & memory.
3. Tap ₹, then tap Advanced > Storage > Internal storage, then find and tap Cached data > OK.

When you clear the cache memory, you don’t lose any important information or settings.

To transfer media files to the memory card
1. Make sure you have a memory card inserted into your device.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Storage & memory > Transfer data.
4. Mark the files that you want to transfer to the memory card.
5. Tap Transfer.

To stop applications and services from running
1. From your Home screen, tap 📱.
2. Find and tap Settings > Apps.
3. Select an application or service, then tap FORCE STOP > OK.

To format the memory card
1. From your Home screen, tap 📱.
2. Find and tap Settings > Storage & memory.
3. Tap ₹, then tap Advanced > Storage > SD Card > ₹, then tap Settings > Format > Erase & format.

! All content on the memory card gets erased when you format it. Make sure you first make backups of all data that you want to save. To back up your content, you can copy it to a computer. For more information, see Managing files using a computer on page 123.

Smart cleaner
Using Smart cleaner you can improve device performance by automatically optimising storage and memory depending on frequency of app use.

To enable or disable Smart cleaner
1. From your Home screen, tap 📱.
2. Find and tap Settings > Storage & memory.
3. Tap the slider beside Smart cleaner.

Managing files using a computer
Use a USB Type-C™ cable connection between a Windows® computer and your device to transfer and manage your files. Once the two devices are connected, you
USB Connection Mode

Your device uses Media transfer mode (MTP).

You can use MTP for managing files and updating device software. This USB mode is used with Microsoft® Windows® computers.

You can also use your device as a Power supply, and charge the other connected device.

Using the MIDI mode, your device can function as a MIDI input for musical instrument apps.

To change USB connection mode

1. Attach a USB Type-C™ connector to your device.
2. Drag down the Status bar, and then tap Charging only.
3. Tap Transfer files (MTP), Power supply or MIDI to enable the desired mode.

Backing up and restoring content

Generally, you should not save photos, videos and other personal content solely on the internal memory of your device. If your device is damaged, lost or stolen, the data stored on its internal memory may be impossible to recover. It is recommended to use the Xperia™ Companion software to make backups which save your data safely to an external device. This method is especially recommended if you are updating your device software to a newer Android version.

Backing up data to a computer

Use the Xperia™ Companion software to back up data from your device to a PC or an Apple® Mac® computer. You can back up the following types of data:

- Contacts and call logs
- Text messages
- Calendar
- Settings
- Media files such as music and videos
- Photos and images
To back up your data using a computer
1. Make sure that Xperia™ Companion for Windows (http://support.sonymobile.com/tools/xperia-companion) or Xperia™ Companion for Mac OS (http://support.sonymobile.com/tools/xperia-companion-mac) is installed on your PC or Mac®.
2. Connect your device to the computer using a USB Type-C™ cable.
3. Open the Xperia™ Companion software if it is not automatically launched. After a few moments, the computer detects your device.
4. Select Backup on the main screen.
5. Follow the on-screen instructions to back up data from your device.

To restore your data using a computer
1. Make sure that Xperia™ Companion for Windows (http://support.sonymobile.com/tools/xperia-companion) or Xperia™ Companion for Mac OS (http://support.sonymobile.com/tools/xperia-companion-mac) is installed on your PC or Mac®.
2. Connect your device to the computer using a USB Type-C™ cable.
3. Open the Xperia™ Companion software if it is not automatically launched.
4. Click Restore.
5. Select a backup file from the backup records, then tap Next and follow the on-screen instructions to restore data to your device.

Backing up data with the Xperia™ Backup & restore application
Using the Xperia™ Backup & restore application, you can make an online backup or a local backup of data. For example, you can back up data manually or turn on the automatic backup function to save data periodically.

The Xperia™ Backup & restore application is recommended for backing up data before you do a factory data reset. With this application you can back up the following types of data to an online account, an SD card or to an external USB storage device that you have connected to your device using a USB Host adapter:
- Contacts and call log
- Conversations
- Calendar data
- Email accounts
- Wi-Fi® networks
- Device settings
- Applications
- Xperia™ Home layout

To back up content to an online account of Xperia Backup & Restore service
1. From your Home screen, tap 📱.
2. Find and tap Settings > Backup & reset.
3. To enable the automatic backup function, tap Automatic backup and then tap the on-off switch.
4. To enable the manual backup function, tap More > Manual backup.
5. If the automatic backup function is enabled, under Select storage, tap Online account.
6. If prompted, read the relevant terms and provided you agree, tap I agree, then follow the on-screen instructions to sign in to your Google™ account.
7. If the manual backup function is enabled, under Where to store files, tap Select storage > Online account.
8. Select the data to back up.
9. If the manual backup function is enabled, tap Back up.
To set up the automatic backup function

If you are backing up content to a USB storage device, make sure the storage device is connected to your device using a USB Host adapter. If you are backing up to an SD card, make sure that the SD card is mounted properly into your device. If you are backing up content to an online account, make sure you have signed in to your Google™ account.

1. From your Home screen, tap 📱.
2. Find and tap Settings > Backup & reset.
4. To enable the automatic backup function, tap the on-off switch.
5. Select where to save backup files.
6. If desired, select a backup frequency, the time to back up and the data to back up. Otherwise the backup is completed according to the default settings.
7. To save your settings, tap <.

To back up content manually

1. If you are backing up content to a USB storage device, make sure the storage device is connected to your device using a USB Host adapter. If you are backing up to an SD card, make sure the SD card is properly inserted into your device. If you are backing up content to an online account, make sure you have signed in to your Google™ account.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Backup & reset.
5. Tap Manual backup, then select a backup destination and the data that you want to back up.
6. Tap Back up.
7. After the data is backed up, tap Finish.

To edit a backup file

1. From your Home screen, tap 📱.
2. Find and tap Settings > Backup & reset.
4. Tap Edit backup file, then select a backup source and the data types that you want to delete.
5. Tap Delete data.
6. Tap OK to confirm.
7. After the data is deleted, tap Finish.

To restore backed up content

1. If you are restoring content from a USB storage device, make sure that the storage device is connected to your device using the USB Host adapter. If you are restoring content from an SD card, make sure that the SD card is properly inserted into your device. If you are restoring content from Xperia Backup & Restore service, make sure you have signed in to your Google™ account.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Backup & reset.
4. Under Xperia™ Backup & Restore, tap Restore data, then select a restore source and the data that you want to restore.
5. Tap Restore data.
6. After the content is restored, tap Finish.

Remember that any changes that you make to your data and settings after you create a backup - such as any new apps you install - get deleted during any subsequent restore procedure.

Backing up data with the Google Backup & restore application

Using the Google Backup & restore application, you can back up data to a Google server. You can also turn on the automatic restore function to restore application data and settings when you reinstall an application.
With this application you can back up the following types of data:

- Applications
- Bookmarks
- Wi-Fi® networks
- Other settings

To back up data to a Google™ account
1. From your Home screen, tap 📱.
2. Find and tap Settings > Backup & reset.
3. Under Google™ Backup & Restore, tap Back up my data and then tap the slider.

To enable or disable automatic restore when you reinstall an application
1. From your Home screen, tap 📱.
2. Find and tap Settings > Backup & reset.
3. Under Google™ Backup & Restore, tap the Automatic restore slider.

Running diagnostic tests on your device
The Xperia™ Diagnostics application can test a specific function or run a full diagnostic test to check if your Xperia™ device is working properly.

Xperia™ Diagnostics can:
- Assess potential hardware or software issues on your Xperia™ device.
- Analyse how well applications perform on your device.
- Log the number of dropped calls during the previous 10 days.
- Identify installed software and provide useful details about your device.

💡 The Xperia™ Diagnostics application is pre-installed on most Android™ devices from Sony. If the Diagnostics option is not available under Settings > About phone, you can download a light version using the Play Store™ application.

To run a specific diagnostic test
1. From your Home screen, tap 📱.
2. Find and tap Settings > About phone > Diagnostics > Test.
3. Select a test from the list.
4. Follow the instructions and tap Yes or No to confirm whether a feature works.

To run all diagnostic tests
1. From your Home screen, tap 📱.
2. Find and tap Settings > About phone > Diagnostics > Test > Run all.
3. Follow the instructions and tap Yes or No to confirm whether a feature works.

To view details about your device
1. From your Home screen, tap 📱.
2. Find and tap Settings > About phone > Diagnostics > Facts.

Restarting and resetting your device
You can force your device to restart or shut down if it stops responding or won’t restart normally. No settings or personal data get deleted.

You can also reset your device to its original factory settings. This action is sometimes necessary if your device stops functioning properly, but note that if you want to keep any important data, you should first back up this data to a memory card or other non-internal memory. For more information, see Backing up and restoring content on page 124.
If your device fails to turn on or you want to reset your device's software, you can use Xperia™ Companion to repair your device. For more information on using Xperia™ Companion, see Computer tool on page 120.

⚠️ Your device may fail to restart if the battery level is low. Connect your device to a charger and try restarting again.

💡 If you are sharing a device with multiple users, you may need to log in as the owner, that is, the primary user, to reset your device to its original factory settings.

To restart your device
1. Press and hold down the power key 😲.
2. In the menu that opens, tap Restart. The device restarts automatically.

To force the device to restart or shut down
1. Press and hold down the power key 😲 and the volume up key at the same time for 6 seconds.
2. Your device vibrates once. Depending on whether you wish to force the device to restart or shut down, proceed as follows.
   - If you wish to force restart the device: Release the keys at this point. The device restarts.
   - If you wish to force shut down the device: Continue pressing the keys. After a few more seconds, the device vibrates three times and turns off.

To perform a factory data reset
1. Back up any important data that is saved on the internal memory of your device to a memory card or other non-internal memory.
2. From your Home screen, tap 📱.
3. Find and tap Settings > Backup & reset > Factory data reset.
4. Tap Reset phone.
5. If required, draw your screen unlock pattern or enter your screen unlock password or PIN to continue.
6. To confirm, tap Erase everything.

⚠️ To avoid permanent damage to your device, do not interrupt factory data reset procedure.

⚠️ After the factory data reset you will lose access to all the encrypted files on your SD card.

💡 Your device does not revert to an earlier software version of Android™ when you perform a factory data reset.

Repairing the device software

If you forget your screen unlock password, PIN or pattern, you can use the device repair feature in Xperia™ Companion to erase the security layer. You need to provide your Google account login details to perform this operation. By running the repair feature, you reinstall software for your device and you may lose some personal data in the process.

To repair the device software using Xperia™ Companion

⚠️ Before performing a software repair, make sure you know your Google™ credentials. Depending on your security settings, you may need to enter them in order to restart the device after a software repair.

1. Make sure that Xperia Companion is installed on your PC or Mac®.
2. Open the Xperia™ Companion software on the computer and press Software repair on the main screen.
3. Follow the instructions that appear on the screen to reinstall the software and complete the repair.
Warranty, SAR and usage guidelines
